

## Background

Electricity supply constraints (load shedding), together with increasing electricity tariffs and decreasing prices of renewable energy technologies, have driven the substantial uptake of Embedded Generation (EG) in South Africa.

According to analyses by Eskom and the evaluation of satellite images published by the South African Photovoltaics Industry Association (SAPVIA), nearly 4.9 GW of behind the meter generation (mainly PV) is operational in South Africa.

While this fivefold increase within 18 months is to a large extent a response to load shedding, embedded generation is a viable option for an increasing number of customer segments and consequently, the market will continue to grow.

Generally most utility-scale renewable generators are connected to Eskom's grid, whereas the majority of commercial, industrial and residential embedded generation is connected to municipal distribution networks.

## Field of Intervention:

# Embedded Generation

Every roof can deliver clean energy, every distribution network should integrate it

## Challenges

The unprecedented uptake of embedded generation – mainly rooftop solar photovoltaic (PV) – has significant implications for network service providers, in terms of financial, technical and safety impacts.

For example, the loss in revenue caused by customers generating part of their own electricity demand is contributing to the financial distress of municipalities.

Systems connected to the grid not adhering to codes and standards can pose a safety hazard to municipal staff working on lines. Knowledge about the capacity and location of embedded generators is an essential input variable for network expansion considerations.

Since the embedded generation market will continue to grow, municipalities should encourage and incentivise customers and operators to register their systems and adhere to all codes, standards and policies.

The challenges can have far adverse effects if these systems are not registered, and municipalities do not know where they are located on the distribution network.

Embedded Generation Nicholas Jenkins, Nick Jenkins, 2000-06-30 This book intended for both students and practising engineers addresses all the issues pertinent to the implementation of embedded generation **The future of Britain's electricity networks** Great Britain: Parliament: House of Commons: Energy and Climate Change Committee, 2010-02-23 Incorporating HC 388 i vi session 2008 09 Electrical Power System Protection C. Christopoulos, A. Wright, 1999-06-30 The death of Professor Arthur Wright in the summer of 1996 deprived me of a friend and a colleague whose judgement and experience shaped this book I pay tribute to his contributions to protection and electrical engineering education In the five years since the first edition appeared many developments have taken place and it is now necessary to update the book The use of digital communications and advanced signal processing techniques is now widespread and several fully numeric relays are available from manufacturers Two new Chapters 13 and 14 have been added to introduce readers to these concepts and associated techniques Artificial intelligence is making its impact in all engineering applications and power system protection is no exception Expert systems fuzzy logic artificial neural networks adaptive and integrated protection synchronized measurements using the global positioning system genetic algorithms flexible ac transmission systems are some of the techniques considered in connection with protection Although many of these techniques have not yet found major application in protection it is nevertheless essential for the educated protection engineer to have a basic understanding of the underlying principles and methodology so that he or she can evaluate their suitability for new relaying problems and applications Chapter 15 was therefore added to guide readers through this developing area I have also added some new material in other chapters to reflect changes over the past years *Innovation and Disruption at the Grid's Edge* Fereidoon Sioshansi, 2017-05-10 Innovation and Disruption at the Grid's Edge examines the viable developments in peer to peer transactions enabled by open platforms on the grid's edge With consumers and prosumers using more electronic platforms to trade surplus electricity from rooftop solar panels share a storage battery or use smart gadgets that manage load and self generation the grid's edge is becoming crowded The book examines the growing number of consumers engaging in self generation and storage and analyzes the underlying causes and drivers of change as well as the implications of how the utility sector particularly the distribution network should be regulated The book also explores how tariffs are set and revenues are collected to cover both fixed and variable costs in a sustainable way This reference is useful for anyone interested in the areas of energy generation and regulation especially stakeholders engaged in the generation transmission and distribution of power Examines the new players that will disrupt the energy grid markets Offers unique coverage of an emerging and unpublished topic Helps the reader understand up to date energy regulations and pricing innovations **Sixteenth European Photovoltaic Solar Energy Conference** H. These are the Utilities Act 2000 which has laid the foundation for greater competition in energy markets and more effective regulation in the interests of consumers, competition in the UK and Europe, energy and the environment, consumer and social issues which looks at market competition and fuel poverty. Part 1 also looks at research and development and the work of the Energy Advisory Panel. Part 2 is concerned with the continuing evolution in the industry with a detailed examination of each sector. Part 3 consists of appendices on the energy industries in the economy, energy demand and energy efficiency, energy prices. Part 4 includes a list of publications and a glossary. Volume 2 consists of detailed indicators which have been grouped into 12 sections covering different aspects of the energy sector. Of the 12 sets of indicators, the most closely linked to energy policy objectives are those concerned with competitive markets, with safe and secure energy supplies, and with sustainable energy supplies. Other indicators are more generally associated with the energy industries' contribution to economic development, efficiency and productivity.
