## **Electron Energy Loss Spectroscopy:**

High-resolution Electron Energy Loss Spectroscopy Judith A. Gates, 1983

**Electron Energy Loss Spectroscopy and Surface Vibrations** H. Ibach, D. L. Mills, 1982 Electron Energy Loss Spectroscopy and Surface Vibrations is devoted to electron energy loss spectroscopy as a probe of the crystal surface. Electrons with energy in the range of a few electron volts sample only a few atomic layers. As they approach or exit from the crystal they interact with the vibrational modes of the crystal surface or possibly with other elementary excitations localized there. The energy spectrum of electrons back reflected from the surface is thus a rich source of information on its dynamics. The book opens with a detailed analysis of the physics that controls the operation.

**Advances in Multi-photon Processes and Spectroscopy** S. H. Lin, Y. Fujimura, A. A. Villaesca, 2010 In view of the rapid growth in both experimental and theoretical studies of multi-photon processes and multi-photon spectroscopy of atoms, ions, and molecules in chemistry, physics, biology, and materials science, it is timely to publish an advanced series that contains review papers readable not only by active researchers in these areas but also by those who are non-experts but who wish to enter the field. This present volume attempts to serve this purpose. Each chapter is written in a self-contained manner by experts in their own area of expertise so that general readers can grasp the knowledge in that area without too much preparation.

*Dynamical Phenomena at Surfaces, Interfaces and Superlattices* Fabrizio Nizzoli, Manuel Cardona, Karl-Heinz Rieder, Roy F. Willis, 2012-12-06

*Oxide Surfaces*, 2001-05-21 The book is a multi-author survey in 15 chapters of the current state of knowledge and recent developments in our understanding of oxide surfaces. The author list includes most of the acknowledged world experts in this field. The material covered includes fundamental theory and experimental studies of the geometrical, vibrational, and electronic structure of such surfaces but with a special emphasis on the chemical properties and associated reactivity. The main focus is on metal oxides but coverage extends from simple rocksalt materials such as MgO through to complex transition metal oxides with different valencies.

**Phonons: Theory and Experiments II** Peter Brüesch, 2012-12-06 The first part of this three-volume treatment, *Phonons: Theory and Experiments I*, has been devoted to the basic concepts of the physics of phonons and to a study of models of interatomic forces. The present second volume, *Phonons: Theory and Experiments II*, contains a thorough study of experimental techniques and the interpretation of experimental results. In a third volume we shall treat a number of phenomena which are directly related to lattice dynamics. The aim of this treatment is to bridge the gap between theory and experiment. Both experimental aspects and theoretical concepts necessary for an interpretation of experimental data are discussed. An attempt has been made to present the descriptive as well as the analytical aspects of the topics. Although emphasis is placed on the experimental and theoretical study of the dynamics of atoms in solids, most chapters also contain a general introduction to the specific subject. The text is addressed to experimentalists and theoreticians working in the vast field of dynamical properties of solids. It will

also prove useful to graduate students starting research in this or related fields The choice of the topics treated was partly determined by the author's own activity in these areas This is particularly the case for the chapters dealing with infrared Raman and inelastic neutron spectroscopy as well as for some newer developments such as the optical spectroscopy of thin films and adsorbates Studies of the Surfaces of Solids by Electron Spectroscopy Sir Ronald Mason, 1986 Scientific and Technical Aerospace Reports, 1967 **Introduction to Photoelectron Spectroscopy** Pradip K.
