Health Scents:

Past Scents Jonathan Reinartz, 2014-03-30 In this comprehensive and engaging volume medical historian Jonathan Reinartz offers a historiography of smell from ancient to modern times Synthesizing existing scholarship in the field he shows how people have relied on their olfactory sense to understand and engage with both their immediate environments and wider corporal and spiritual worlds This broad survey demonstrates how each community or commodity possesses or has been thought to possess its own peculiar scent Through the meanings associated with smells osmologies develop what cultural anthropologists have termed the systems that utilize smells to classify people and objects in ways that define their relations to each other and their relative values within a particular culture European Christians for instance relied on their noses to differentiate Christians from heathens whites from people of color women from men virgins from harlots artisans from aristocracy and pollution from perfume This reliance on smell was not limited to the global North Around the world Reinartz shows people used scents to signify individual and group identity in a morally constructed universe where the good smelled pleasant and their opposites reeked With chapters including Heavenly Scents Fragrant Lucre and Odorous Others Reinartz's timely survey is a useful and entertaining look at the history of one of our most important but least understood senses

Fading Scent Eleanor Miles, Long before memory begins to fade or cognitive tests show decline the brain issues a subtle silent warning the loss of smell This seemingly harmless symptom is increasingly recognized as one of the most accurate early predictors of neurodegenerative diseases The olfactory bulb is directly wired to the brain's memory and emotion centers serving as an exposed vanguard of our nervous system When toxic proteins associated with Alzheimer's and Parkinson's disease begin their invasion this delicate sensory bridge is often the first casualty Yet modern medicine routinely dismisses a fading sense of smell as a mere nuisance of aging Eleanor Miles unpacks the cutting edge neurology behind olfactory decline She explores the hidden mechanics of how our brain processes scent why this specific sensory pathway is so vulnerable to early neurological damage and what this means for the future of non-invasive diagnostics Protecting your cognitive longevity starts with paying attention to the subtlest signals Learn how to monitor your olfactory health and discover the proactive steps you can take to safeguard your mind bisac HEALTH FITNESS Diseases Conditions Alzheimer's Dementia MEDICAL Neuroscience amazon keywords early signs alzheimers olfactory nerve health neurodegenerative disease prevention short excerpt Your sense of smell is the brain's early warning system Learn why losing it could be the first indicator of neurodegenerative disease years before memory loss Eleanor Miles *Fading Scent* What the Loss of Smell Tells Us About the Future of Our Brain Health *The Ephemeral History of Perfume* Holly Dugan, 2011-11-01 In contrast to the other senses smell has long been thought of as too elusive too fleeting for traditional historical study Holly Dugan disagrees arguing that there are rich accounts documenting how men and women produced consumed and represented perfumes and their ephemeral effects She delves deeply into the cultural archive of olfaction to explore what a sense of smell reveals about

everyday life in early modern England In this book Dugan focuses on six important scents incense rose sassafras rosemary ambergris and jasmine She links these smells to the unique spaces they inhabited churches courts contact zones plague ridden households luxury markets and pleasure gardens and the objects used to dispense them This original approach provides a rare opportunity to study how early modern men and women negotiated the environment in their everyday lives and the importance of smell to their daily actions Dugan defines perfume broadly to include spices flowers herbs animal parts trees resins and other ingredients used to produce artificial scents smokes fumes airs balms powders and liquids In researching these Renaissance aromas Dugan uncovers the extraordinary ways now largely lost that people at the time spoke and wrote about smell objects ambered civited expired fetored halited resented and smeeked or were described as breathful embathed endulced gracious halited incensial odorant pulvil redolent and suffite A unique contribution to early modern studies The Ephemeral History of Perfume is an unparalleled study of olfaction in the Renaissance a period in which new scents and important cultural theories about smell were developed Dugan s inspired analysis of a wide range of underexplored sources makes available to scholars a remarkable wealth of information on the topic
