*Evidence-Based Climate Science* Don Easterbrook,2016-09-16 *Evidence Based Climate Science Data Opposing CO2 Emissions as the Primary Source of Global Warming* Second Edition includes updated data related to the causes of global climate change from experts in meteorology geology atmospheric physics solar physics geophysics climatology and computer modeling This book objectively gathers and analyzes scientific data concerning patterns of past climate changes influences of changes in ocean temperatures the effect of solar variation on global climate and the effect of CO2 on global climate This analysis is then presented as counter evidence to the theory that CO2 is the primary cause behind global warming Increasingly scientists are pointing to data which suggests that climate changes are a result of natural cycles which have been occurring for thousands of years Unfortunately global warming has moved into the political realm without enough peer reviewed research to fully validate and exclude other more natural causes of climate change For example there is an absence of any physical evidence that CO2 causes global warming so the only argument for CO2 as the cause of warming rests entirely in computer modeling Thus the question becomes how accurate are the computer models in predicting climate What other variables could be missing from the models In order to understand modern climate changes we need to look at the past history of climate changes Vast amounts of physical evidence of climate change over the past centuries and millennia have been gathered by scientists Significant climate changes have clearly been going on for many thousands of years long before the recent rise in atmospheric CO2 *Evidence Based Climate Science Data Opposing CO2 Emissions as the Primary Source of Global Warming* Second Edition documents past climate changes and presents physical evidence for possible causes Provides scientific evidence for issues related to global climate change that is not readily available elsewhere Offers detailed analysis of temperature measurements with the goal of helping readers to understand conflicting claims about global warming heard every day in the news media Presents real time data on polar ice Presents the real time effect of CO2 on global warming rather than forecasts based on computer models      **Hearings, Reports and Prints of the House Committee on**
