Pichal, 2012-12-06 The General Assembly of the International Union of Theoretical and Applied Mechanics decided in Cambridge United Kingdom in 1982 to arrange the Symposium on Optical Methods in the Dynamics of Fluids and Solids This decision was stimulated by the fact that optical diagnostic methods are a more and more important tool in experimental mechanics In contrast to the foregoing Symposium in Poitiers 1976 which was devoted exclusively to optical methods in the mechanics of solids it was a fruitful idea to bring together during the present Symposium scientists engaged in optical methods in the dynamics of all phases It was proposed by the International Scientific Committee of the Symposium that contributions in experimental fluid dynamics should deal with transition from laminar to turbulent flow compressible fluid flow including high temperature flow non equilibrium phenomena in fluid dynamics and the interaction of fluid flow with solid boundaries and bodies As regard the mechanics of solids the contributions should deal with the application of optical methods in the wave propagation in shock loaded bodies in phenomena connected with the fracture mechanism in nonstationary Vibrations of elements and parts of systems and in nonstationary strains in structures The International Scientific Committee preferred to avoid invited lectures and in cooperation with the National Committees of IUTAM called for contribution from individual countries A Collection of Technical Papers ,1984 **Energy Research Abstracts** ,1983 Experimental and Numerical Flow Visualization ,1995
