Extreme Environmental Change And Evolution:

Extreme Environmental Change and Evolution Ary A. Hoffmann, Peter A. Parsons, 1997-07-10 Most natural populations intermittently experience extremely stressful conditions This book discusses how such conditions can cause periods of intense selection increasing both phenotypic and genetic variation and allowing organisms with novel characteristics to be first generated and then established in the population The authors argue that stressful conditions can have a major impact on the environment backing up their arguments with evidence from the fossil record They suggest further that as a consequence periods of stress must be taken into consideration when long term conservation strategies are planned particularly as stressful conditions are becoming increasingly prevalent as a result of human activities This broad overview will be of great interest to students and researchers in the field of evolutionary biology genetics ecology palaeontology and conservation biology

Swaddle, 1997 Why does nature love symmetry In this up to date review of symmetry and its evolutionary implications Anders Møller and John Swaddle argue that symmetry is related to genetic stability and fitness and that symmetric individuals appear to have quantifiable and significant advantages over their asymmetric counterparts In contrast asymmetry a common measure of developmental instability is the result of environmental or genetic disruptions of developmental processes such as

pollutants competition parasitism inbreeding genetic mutation and hybridization Moller and Swaddle maintain that deviations from morphological symmetry are important factors in social or sexual situations animals may be able to use symmetry as an honest indication of quality when assessing potential mates or competitors This comprehensive review of the literature on developmental stability will be important reading for students and researchers in the fields of ecology evolutionary biology genetics and animal behavior Population Ecotoxicology Michael C.
