Eye Muscle Surgery:

Eye Muscle Surgery: Basic Data A. Roth, C. Speeg-Schatz, 2026-02-02 The aim of eye muscle surgery is to restore alignment of the visual axes and ocular stability. Albeit compensatory and largely empirical, this surgery can be perfected with a better understanding of the physiopathological mechanisms involved. More detailed semiological analysis, taking into account of intraoperative data and the use of microsurgical technique. The three parts of this book allow each of these factors to be discussed at length.

Strabismus Surgery David A. Plager, 2004 Strabismus is a disorder in which the eyes are misaligned. This volume is the most advanced reference for techniques in diagnosis and treatment of strabismus. Chapters cover diagnosis of surgical and nonsurgical treatments for and management of esotropia, eyes aligned inward; exotropia, eyes aligned outward; dissociated strabismus; complex paralytic strabismus; restrictive strabismus; and nystagmus. It also contains a chapter on reoperation strategies.

Strabismus Surgery Irene H. Ludwig, 2021-01-27 A unique how-to guide on surgical management of strabismus from top experts in the field. Strabismus correction is the third most common ophthalmic surgery in the US with 1.2 million procedures performed each year. Strabismus Surgery by renowned pediatric ophthalmologist Irene Ludwig provides comprehensive coverage of strabismus treatment featuring state-of-the-art techniques based on recent anatomical research and discoveries. Throughout the text and accompanying videos, an impressive group of contributors share clinical pearls and firsthand knowledge. Recent research shows that strabismus has a mechanical etiology more frequently than previously thought and that by directly correcting the mechanical defects, more targeted correction is possible than with traditional approaches. Accordingly, the book is organized by mechanism rather than strabismic deviations and patterns. Presented in four parts, each of which is further delineated by sections, this unique textbook includes 36 chapters starting with the fascinating history of strabismus surgery and concluding with future possible treatments.

Key Highlights: New surgical techniques designed to correct muscle displacements and muscle defects related to abnormalities of the extraocular muscle pulleys and intermuscular bands; Recognition and repair of stretched scar and flap tear; A section dedicated to CNS-related causes of strabismus discusses state-of-the-art surgical approaches for conditions including nystagmus and cranial nerve palsies; A comprehensive summary of injection techniques using botulinum toxin and bupivacaine to correct strabismus particularly in otherwise inoperable conditions; Ninety strabismus surgery videos demonstrate a full spectrum of basic to advanced techniques; Remarkable illustrations beautifully capture the complex anatomy of the eye muscles and pulleys. The mechanistic approaches described in this outstanding resource will help trainees and seasoned ophthalmologists achieve more precise and lasting results.
