## F Elements:

Organometallics of the f-Elements Marks, 2013-06-29 While the organometallic chemistry of the d block transition elements has been a flourishing field for the past 25 years it has only been in the last several years that dramatic activity and progress has occurred in the area of lanthanide and actinide organometallic chemistry The f element organometallic research effort has been truly multinational and multidisciplinary In a large number of countries scientists have become increasingly interested in the synthesis reactivity spectroscopy and the molecular and electronic structures of f element organometallic compounds The backgrounds of these scientists range from organic inorganic nuclear and catalytic chemistry to chemical and nuclear physics The motivations for the study of f element organometallics have been equally varied In the area of basic research there has been a growing realization that the lanthanides and actinides represent two unique and to a great extent neglected families of elements in which many fascinating aspects of chemistry and bonding remain to be explored On a more practical level an increasing number of these elements play important roles in nuclear energy production and in industrial catalytic processes It has become apparent that efficiency and safety in both areas could greatly benefit from increased knowledge In the past there has been no suitable international forum available for bringing together

researchers in the diverse areas of f element organometallic science mentioned above Separations of f Elements Gregory R. Choppin, K.L. Nash, 2013-06-29 The symposium which provided the incentive for this volume was conducted in San Diego California as a part of the 207 National Meeting of the American Chemical Society March 13-17 1994 It was conceived partly to continue an informal decennial sequence of symposia dedicated to the topic of element separations A lot has changed in the world of f elements over the last ten years precipitating a change in emphasis which should be evident to most practitioners in the field Production and reprocessing of nuclear fuels are no longer the principal drivers of f element separation technology Separations technology for environment restoration waste disposal and the preparation of high purity lanthanides are now the defining parameters in this important field These imperatives are reflected in the contributions to this volume The symposium itself must be considered a success as the attendance at all sessions was above expectations despite the fact that it was conducted on the last two days of a large five day meeting Our thanks to the speakers for their quality presentations and to the audience who persevered to the end of a long meeting and against the temptation of the excellent weather of San Diego in the springtime A complete list of symposium participants is given in Appendix 1

Preparation of this volume has been a relatively painless undertaking largely as a result of the high quality of the submitted papers **The elements of coordinate geometry, by J.H. Grace and F. Rosenberg. Pt. 2 The conic** John Hilton
