Elements Of Mathematical Semantics:

The Elements of Mathematical Semantics Maurice V. Aldridge, 2011-06-01 TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language. The series publishes state-of-the-art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. TRENDS IN LINGUISTICS considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing.

Elements of Formal Semantics Yoad Winter, 2016-04-08 Introducing some of the foundational concepts, principles, and techniques in the formal semantics of natural language. *Elements of Formal Semantics* outlines the mathematical principles that underlie linguistic meaning. Making use of a wide range of concrete English examples, the book presents the most useful tools and concepts of formal semantics in an accessible style and includes a variety of practical exercises so that readers can learn to utilise these tools effectively. For readers with an elementary background in set theory and linguistics or with an interest in mathematical modelling, this fascinating study is an ideal introduction to natural language semantics. Designed as a quick yet thorough introduction to one of the most vibrant areas of research in modern linguistics today, this volume reveals the beauty and elegance of the mathematical study of meaning. A *Proposed Software Description Language for Representing Program Logic in XML* Khaled Mahmoud, 2013-02-08 Master's Thesis from the year 2012 in the subject Computer Science Applied grade none course Information Technology language English abstract. This thesis proposes a software description language to represent the source code of C, Java, and VB.NET in the Extensible Markup Language. The similarity of semantics between these languages enables representing the source code in a form such that both the source code and logic can be easily shared and reused between these languages. By performing semantic and syntactic comparison between C, Java, and VB.NET, the proposed language has been designed to include the similar and identical features and language constructs. For every adopted language construct, a corresponding construct in the proposed language has been developed. The validity of the proposed language has been investigated and proved theoretically by conducting a semantic comparison between the three languages and experimentally by developing applications to convert source code from Java into the proposed language and from the proposed language into VB.NET. Validation cases have been designed to include various programs such as sorting, searching, and also to include the most used programming constructs in the three languages. Source code of the validation cases have been converted from Java into the

proposed language and from the proposed language into VB NET Java and VB NET programs of the validation cases have been executed and results compared The results were identical for all conducted experiments The proposed language has some major benefits in the conversion between programming languages as an intermediary language It may also be used in the integration between systems as it enables sharing of programming logic at runtime Existing integration technologies only enable the sharing of data between various systems This thesis is not concerned with adapting programming languages libraries and functions Future work may extend the proposed language to adapt different features such as pointers and multiple inheritance into the proposed language

Semantic Web Technologies and Legal Scholarly Publishing Silvio Peroni,2014-06-20 This work deals with the applications of Semantic Publishing technologies in the legal domain i e the use of Semantic Web technologies to address issues related to the Legal Scholarly Publishing Research in the field of Law has a long tradition in the application of semantic technologies such as Semantic Web and Linked Data to real world scenarios This book investigates and proposes solutions for three main issues that Semantic Publishing needs to address within the context of the Legal Scholarly Publishing the need of tools for linking document text to a formal representation of its meaning the lack of complete metadata schemas for describing documents according to the publishing vocabulary and the absence of effective tools and user interfaces for easily acting on semantic publishing models and theories In particular this work introduces EARMARK a markup meta language that allows one to create markup documents without the structural and semantic limits imposed by markup languages such as XML EARMARK is a platform to link the content layer of a document with its intended formal semantics and it can be used with the Semantic Publishing and Referencing SPAR Ontologies another topic in this book SPAR Ontologies are a collection of formal models providing an upper semantic layer for describing the publishing domain Using EARMARK as a foundation for SPAR descriptions opens up to a semantic characterisation of all the aspects of a document and of its parts Finally four user friendly tools are introduced LODK Viz Graffoo and Gaffe They were expressly developed to facilitate the interaction of publishers and domain experts with Semantic Publishing technologies by shielding such users from the underlying formalisms and semantic models of such technologies

Elements of Mathematical Logic and Set Theory Jerzy Słupecki,Ludwik Borkowski,1967 **Higher-Order Metaphysics** Peter Fritz,Nicholas K. Jones,2024 This volume explores the use of higher order logics in metaphysics Seventeen original essays trace the development of higher order metaphysics discuss different ways in which higher order languages and logics may be used and consider their application to various central topics of metaphysics *Neurosemantics* Alessio Plebe,Vivian M. De La Cruz,2016-03-16 This book examines the concept of Neurosemantics a term currently used in two different senses the informational meaning of the physical processes in the neural circuits and semantics in its classical sense as the meaning of language explained in terms of neural processes The book explores this second sense of neurosemantics yet in doing so it addresses much of the first meaning as well Divided into two parts the book starts with a description and analysis of the

mathematics of the brain including computational units representational mechanisms and algorithmic principles This first part pays special attention to the neural architecture which has been used in developing models of neurosemantics The second part of the book presents a collection of models and describes each model reproducing specific aspects of the semantics of language Some of these models target one of the core problems of semantics the reference of nouns and in particular of nouns with a strong perceptual characterization Others address the semantics of predicates with a detailed analysis of colour attributes While this book represents a radical shift from traditional semantics it still pursues a line of continuity that is based on the idea that meaning can be captured and explained by a sort of computation *International Books in Print* ,1990 **Progressions and Innovations in Model-Driven Software Engineering** Díaz, Vicente García,2013-06-30 Users increasingly demand more from their software than ever before more features fewer errors faster runtimes To deliver the best quality products possible software engineers are constantly in the process of employing novel tools in developing the latest software applications Progressions and Innovations in Model Driven Software Engineering investigates the most recent and relevant research on model driven engineering Within its pages researchers and professionals in the field of software development as well as academics and students of computer science will find an up to date discussion of scientific literature on the topic identifying opportunities and advantages and complexities and challenges inherent in the future of software engineering **A Theory of Programming Language Semantics** Robert Milne,Christopher Strachey,1976 **Digest of Papers** ,1977 **The Three Cultures** Jerome Kagan,2009-04-27 Jerome Kagan examines the basic goals vocabulary and assumptions of the natural sciences social sciences and humanities summarizing their unique contributions to our understanding of human nature Digest of Papers - Compcon ,1977 *Assets* ,2006 **Principles and Practice of Semantic Web Reasoning** ,2003 **For the Learning of Mathematics** ,2000 *Semantics-Oriented Natural Language Processing* Vladimir Fomichov A.,2009-12-01 Gluecklich die wissen dass hinter allen Sprachen das Unsaegliche steht Those are happy who know that behind all languages there is something unsaid Rainer Maria Rilke This book shows in a new way that a solution to a fundamental problem from one scientific field can help to find the solutions to important problems emerged in several other fields of science and technology In modern science the term Natural Language denotes the collection of all such languages that every language is used as a primary means of communication by people belonging to any country or any region So Natural Language NL includes in particular the English Russian and German languages The applied computer systems processing natural language printed or written texts NL texts or oral speech with respect to the fact that the words are associated with some meanings are called semantics oriented natural language processing systems NLPs On one hand this book is a snapshot of the current stage of a research program started many years ago and called Integral Formal Semantics IFS of NL The goal of this program has been to develop the formal models and methods helping to overcome the difficulties of logical character associated with the engineering of

semantics oriented NLPs The designers of such systems of arbitrary kinds will find in this book the formal means and algorithms being of great help in their work *Automatic Generation and Management of Program Analyses* Kwangkeun Yi, University of Illinois at Urbana-Champaign. Department of Computer Science, 1993 The user adds projection expressions for selected domains System Z1 automatically generates a new analyzer which will conduct the program analysis over the simplified domain structure Projection expressions permit accuracy to be traded against cost without requiring that the specification of the analysis be altered Using system Z1 we have designed constant propagation alias analysis def use use def chain analysis and memory object lifetime analysis The target languages are C FORTRAN and SCHEME without restriction upon the programs treated We present a series of experiments results that demonstrate the uses of projection expressions for these analyses problems

Modeling Reactive Systems with Statecharts David Harel, Michal Politi, 1998 The book provides a detailed description of a set of languages for modelling reactive systems which underlies the STATEMATE toolset The approach is dominated by the language of Statecharts used to describe behavior combined Activity charts for describing activities i.e. the functional building blocks capabilities or objects and the data that flows between them These two languages are used to develop a conceptual model of the system which can be combined with the system's physical or structural model described in a third language Module charts The three languages are highly diagrammatic in nature constituting full fledged visual formalisms complete with rigorous semantics They are accompanied by a Data Dictionary for specifying additional parts of the model that are textual in nature

Mathematical Foundations of Programming Language Semantics Michael Main, Austin Melton, Michael Mislove, David Schmidt, 1988-03-09 This volume is the proceedings of the 3rd Workshop on the Mathematical Foundations of Programming Language Semantics held at Tulane University New Orleans Louisiana April 8-10 1987 The 1st Workshop was at Kansas State University Manhattan Kansas in April 1985 see LNCS 239 and the 2nd Workshop with a limited number of participants was at Kansas State in April 1986 It was the intention of the organizers that the 3rd Workshop survey as many areas of the Mathematical Foundations of Programming Language Semantics as reasonably possible The Workshop attracted 49 submitted papers from which 28 papers were chosen for presentation The papers ranged in subject from category theory and Lambda calculus to the structure theory of domains and power domains to implementation issues surrounding semantics
