Scientific Inquiry Cycle: Review

Science helps communities solve problems by developing knowledge and creating things that "solve" with a local focus such as water quality or waste management using science to assess or improve solutions that have a positive impact. Understanding the problem fully, including its causes and effects, is the first step in finding an effective solution.

Designing solutions requires considering various conditions, such as budget, time, and safety concerns. Community members have a part in a solution's success. Challenges, setbacks, and the inability to weigh their individual contributions for solutions, creating resources for a cause that they affect in real and ways of use, cannot influence the effectiveness of the solution.

After identifying a solution, determining how it works, what conditions affected it, and any compromises that have already been or should involve on the way. Communication, strong enough results, and following up on the results of the solution are important steps. The process of how designing science locally encourages responsible decision-making and helps communities thrive.

6A. Mark the best answer for each question.

1. What is the first important step when working on a local problem?
- Designing a solution
 - Ignoring the most important conditions
 - Ignoring safety concerns
 - Understanding the problem fully
2. What does determining conditions in a solution help with?
- Ignoring the conditions of the solution
 - Establishing a solution that is safe and viable
 - Knowing how to avoid safety concerns
 - Determining that the solution has no risks
3. Which is an example of a trade-off?
- Finding a solution with no risks
 - Ignoring safety concerns
 - Knowing how to avoid safety concerns
 - Using unsafe materials
4. Why is compromise important?
- To avoid not being in agreement
 - To make ideas stronger
 - To finish the problem by combining ideas
 - To avoid discussing the problem

6B. Mark if the statement is True (T) or False (F).

1. A solution made after one failed attempt is usually better than one that is made after several failed attempts.

Answer for each question.

1. How does identifying a solution help in the scientific process?

2. Why must this be considered in designing a solution?

3. What might happen when creating a trade-off?

4. How might science solutions be implemented?

5. Why are trade-offs essential in scientific understanding?
