Livingston,2018-01-09 *Magic Science Religion* explores surprising intersections among the three meaning making and world making practices named in the title Through colorful examples the book reveals circuitous ways that social cultural and natural systems connect enabling real kinds of magic to operate Among the many case studies are accounts of how an eighteenth century actor gave his audience goosebumps how painters poets and pool sharks use nonlinearity in working their magics how the first vertebrates gained consciousness how plants fine tuned human color vision and the necessarily magical element of activism that builds on the conviction that another future is possible while working to push self fulfilling prophecy into political action

is rational some practise magic some orientate to legal convention and tradition and others defer to science and logic Starting with anthropological studies of witchcraft and working through to contemporary debates about epistemology and ontology in social science this book systematically examines the ways key questions about these issues have been framed and answered These include Can magic be real either for members of the cultures that practise it or more generally How can we arbitrate between different types of rationality Is science a benchmark for studying other forms of rationality or just a cultural practice like any other What are the implications of these issues for the social sciences themselves This book will be of interest to anthropologists sociologists philosophers of the social sciences and science studies practitioners
