Note: There is no accepted model for design documentation. You need to check what is specifically required in your case.

This chapter covers the basic general requirements:

- The purpose of an engineering design report
 - Its readership
 - The general characteristics of design documentation
 - The *Summary*
 - Development of a model
 - Design calculations
 - Checklist

Purpose of a Design Report

Design reports are used to communicate your solution of a design problem, usually to your boss or a colleague.

The design report is a critical component of the design process. An extremely competent or ingenious design solution cannot be communicated by drawings alone; it needs to be supported by comprehensive documentation.

Readership

The report should be written for another person of equal or greater competence than yourself.

General Characteristics of Design Documentation

1. The report should be **self-contained**, except for references to other specific documents (e.g. contracts, drawings, and standards).
2. **Your report must contain all of the information needed for someone to check how you arrived at your recommended solution.** While carrying out your design, you will have used analysis to demonstrate that your design will actually solve the problem. This needs to be clearly set out in your documentation.
