M. Etter,1995-11-01 **Engineering Problem Solving with C** D. M. Etter,2005 **Engineering Problem Solving** Milton C. Shaw,2001-09-27 Engineering at its origins was a profession of problem solving The classic text Dialogues Concerning Two New Sciences by Galileo Galilei is revisited in this ambitious and comprehensive book by Milton Shaw In depth discussions of passages from the Galileo text emphasize the mind set of engineering specifically the roles played by experimentation and dialog in analysis and creativity In the epilogue the author points out that engineering students are usually exposed to two types of faculty The first type is mathematically oriented and mostly interested in analytical solutions The second type is interested in devising and experimenting with innovative solutions However since many talented graduates move directly into teaching instead of gaining real world experience an imbalance of analytical teaching has occurred Shaw points out through an example by Dr Dave Lineback that learning to solve practical engineering problems is a very important part of an engineer s education but is often denied due to expense and time and effort required This book fills in many of the gaps in engineering education by showing students and professionals the historical background of problem solving Among those who will find this book particularly useful are engineers working in cross disciplinary capacities such as mechanical engineers working with electrical engineering concepts or polymeric materials engineers preparing for professional engineering exams mid career engineers looking to broaden their problem solving skills and students looking for help growing their skills *Programming and Problem Solving with C++* Nell B. Dale,Chip Weems,Mark R. Headington,2002 This book continues to reflect our experience that topics once considered too advanced can be taught in the first course The text addresses metalanguages explicitly as the formal means of specifying programming language syntax **Data Abstraction and Problem Solving with C++** Frank M. Carrano,Janet J. Prichard,2005 Designed for a second course in computer science this textbook introduces the data abstraction technique for building walls between a program and its data structures and presents various abstract data types and their implementations as C classes The author evaluates the advantages and disadvantages of array based and pointer based data structures and explains the concepts behind recursion inheritance polymorphism algorithm efficiency and balanced search trees Annotation 2004 Book News Inc Portland OR booknews com **Engineering Problem Solving with ANSI C** D.
