

# Financial Cryptography in 7 Layers

Ian Grigg [1] [2]

1998 - 2000

**Abstract:** Financial Cryptography is substantially complex, requiring skills drawn from diverse and incompatible, or at least, unfriendly, disciplines. Caught between Central Banking and Cryptography, or between accountants and programmers, there is a grave danger that efforts to construct Financial Cryptography systems will simplify or omit critical disciplines.

This paper presents a model that seeks to encompass the breadth of Financial Cryptography (at the clear expense of the depth of each area). By placing each discipline into a seven layer model of introductory nature, where the relationship between each adjacent layer is clear, this model should assist project, managerial and requirements people.

Whilst this model is presented as efficacious, there are limits to any model. This one does not propose a methodology for design, nor a checklist for protocols. Further, given the young heritage of the model, and of the field itself, it should be taken as a hint of complexity rather than a defining guide.

## Introduction

Financial Cryptography is substantially complex [3]. For a field that is nominally only half a decade old, by some viewpoints, it is apparent from the implementation work that has been done that many more aspects were involved than envisaged by early pioneers.

Financial Cryptography appears to be a science, or perhaps an art, that sits at the intersection of many previously unrelated disciplines:

- Accountancy and Auditing
- Programming
- Systems Architecture
- Cryptography
- Economics
- Internet
- Security
- Finance and Banking
- Risk
- Marketing and Distribution
- Central Banking

[4]

At such a busy juncture of so many distinctive bases of knowledge, problems are bound to arise. Not only the inevitable confusion and wasted resources, but the difficulty in acquiring technical, management and marketing talent that can comfortably work in the field is an issue.

As a preliminary step to the better understanding of Financial Cryptography projects, it is often of some interest to structure these disciplines into models that aid dialogue, comparisons and decision making.
