**Design Innovation for the Built Environment** Michael Hensel, 2013-03-01 Today architecture and other fields in the built environment face the steep task of answering complex questions pertaining to sustainability performance and adaptability How are these disciplines to accomplish these difficult tasks at such an immense pace How might architectural practice renovate itself accordingly Worldwide it is becoming increasingly clear that different modes of research are emerging which are triggered directly by the need to renovate practice One significant prevailing mode is what has come to be known as research by design This book delivers an overview of this pluralistic domain Bringing together a range of leading architects architectural theorists and designers it outlines the developments in current practice from leading individuals based in the USA UK Australia Japan and Europe Edited by a recognized expert this book exposes the undercurrent of research which is taking place and how this will contribute to the renovation of architectural practice

**Masterplanning the Adaptive City** Tom Verebes, 2013-10-08 Computational design has become widely accepted into mainstream architecture but this is the first book to advocate applying it to create adaptable masterplans for rapid urban growth urban heterogeneity through computational urbanism Practitioners and researchers here discuss ideas from the fields of architecture urbanism the natural sciences computer science economics and mathematics to find solutions for managing urban change in Asia and developing countries throughout the world Divided into four parts historical and theoretical background our current situation methodologies and prototypical practices the book includes a series of essays interviews built case studies and original research to accompany chapters written by editor Tom Verebes to give you the most comprehensive overview of this approach Essays by Marina Lathouri Jorge Fiori Jonathan Solomon Patrik Schumacher Peter Trummer and David Jason Gerber Interviews with Dana Cuff Xu Wei Guo Matthew Prior Tom Barker Su Yunsheng and Brett Steele Built case studies by Zaha Hadid Architects James Corner Field Operations XWG Studio MAD OCEAN Consultancy Network Plasma Studio Groundlab Peter Trummer Serie Architects dotA and Rocker Lange Architects *The Routledge Companion to Twentieth and Early Twenty-First Century Urban Design* Jon Lang, 2020-11-09 The Routledge Companion to Twentieth and Early Twenty First Century Urban Design is a fully illustrated descriptive and explanatory history of the development of urban design ideas and paradigms of the past 150 years The ideas and projects hypothetical and built range in scale from the city to the urban block level The focus is on where the generic ideas originated the projects that were designed following their precepts the functions they address and or afford and what we can learn from them The morphology of a city its built environment evolves unselfconsciously as private and governmental investors self consciously erect buildings and infrastructure in a pragmatic piecemeal manner to meet their own ends Philosophers novelists architects and social scientists have produced myriad ideas about the nature of the built environment that they consider to be superior to those forms resulting from a laissez faire attitude to urban development Rationalist theorists dream of ideal futures based

on assumptions about what is good empiricists draw inspirations from what they perceive to be working well in existing situations Both groups have presented their advocacies in manifestoes and often in the form of generic solutions or illustrative designs This book traces the history of these ideas and will become a standard reference for scholars and students interested in the history of urban spaces including architects planners urban historians urban geographers and urban morphologists Routledge Handbook of Urban Landscape Research Kate Bishop,Linda Corkery,2022-12-27
