and gear to hold them in place.

(c) Check condition of seals on each side of head gear case, replace if necessary.

(d) Install bearing (2) on shaft. Bearing is checked and is installed with the shaft in the frame.

(e) Slide the shaft through the L.A. bearing bore and start it through head gear case. Install head gear, shaft, spacer over shaft. Slide shaft completely into place. Adjust the head gear back-L.A. The head gear must be adjusted for full tooth contact, and 100% clearance, measured at the pitch line of the teeth. The head gear case is checked with the shaft. There will be a single tooth mesh between the gear, and the tooth will be centered in the other gear. The clearance measurement must be taken with the shafts which were positioned between the two head gears in the other gear. The clearance is adjusted by adding or subtracting shims behind the head gear on the reverse shaft in conjunction with adding or subtracting shims between the oil seal retainer and bearing housing at the bottom of the vertical spring center drive shaft. See line 4 for more information. The following items are available for this adjustment.
