Fischer Indole Synthesis:

The Fischer Indole Synthesis Brian Robinson, 1982 A comprehensive survey of the Fischer indole synthesis Emphasizes three main features of the reaction its development the clarification of its mechanism and the utilization of it and its extensions in the synthetic process Covers the investigations of the reaction from its discovery in 1883 through the last published report in 1981

Name Reactions in Heterocyclic Chemistry Jie Jack Li, 2004-12-13 Covers important name reactions relevant to heterocyclic chemistry The field of heterocyclic chemistry has long presented a special challenge for chemists Because of the enormous amount and variety of information it is often a difficult topic to cover for undergraduate and graduate chemistry students even in simplified form Yet the chemistry of heterocyclic compounds and methods for their synthesis form the bedrock of modern medicinal chemical and pharmaceutical research Thus there is a great need for high quality up to date and authoritative books on heterocyclic synthesis helpful to both the professional research chemist as well as the advanced student Name Reactions in Heterocyclic Chemistry provides a one stop repository for this important field of organic chemistry The primary topics include three and four membered heterocycles five membered heterocycles including indoles furans thiophenes and oxazoles six membered heterocycles including quinolines isoquinolines and pyrimidines and other heterocycles Each name reaction is summarized in seven sections Description Historical perspective Mechanism Variations and improvements Synthetic utility Experimental References Authored by a team of world renowned contributors some of whom have discovered the very reactions they describe Name Reactions in Heterocyclic Chemistry represents a state of the art resource for students and researchers alike

A Study of the Fischer Indole Synthesis Frank P. Robinson (Jr.), 1964 With the aim of gaining evidence in support of the proposed dienone imine intermediate in the Fischer indole synthesis several attempts were made to form a Diels Alder adduct of this intermediate by the thermal cyclization of simple phenylhydrazones in the presence of the dienophiles maleic anhydride and tetracyanoethylene Even though cyclization of the phenylhydrazones to the corresponding indoles occurred under the conditions used no adduct could be isolated With maleic anhydride as the dienophile hydrazide formation occurred instead Attempts to form such an adduct by cyclizing the diacetyl derivative of methyl ethyl ketone phenylhydrazone in the presence of maleic anhydride were also unsuccessful The attempted preparation of the diacetyl derivatives of 2,6-dimethylphenylhydrazones led to mono and di acylated 2,6-dimethylphenylhydrazines instead An improved technique for the identification of these latter compounds was devised This method consists of hydrogenolysis of the N-N bond of the acylated hydrazines with Raney nickel and hydrazine followed by isolation and identification of the resulting fragments Finally when N-methyl-2,6-dichlorophenylhydrazine was prepared and condensed with cyclohexanone under mild room temperature conditions two indoles were isolated and their structures proven by unambiguous syntheses The formation of these products is explained in terms of the proposed dienone imine intermediate
