**Tax Map** - is a graphic representation of an LGU, or part of an LGU, drawn to scale and having property lines and jurisdictional boundaries delineated showing all parcels of real property and identifying each separate real property ownership by a unique number. A tax map is also referred to as Property Identification Map.

**Tax Mapping** - is a highly accurate method of field operations for identifying real property units, defining property boundaries, determining actual use, and discovering undeclared properties for taxation purposes.

**Turnover Rent or Participation Rent** - any form of lease rental arrangement in which the lessor/landlord receives a form of rental that is based upon the earnings of the lessee/tenant. Percentage rent is an example of a turnover rent.

**Useful Life** - is the period of time over which the property, with typical maintenance, may reasonably be expected to perform the function for which it was designed or intended.

**Utility** - a relative or comparative term rather than an absolute condition, that refers to the degree of usefulness of a property.

The utility of agricultural land is measured by its productive capacity. If the land has development potential, its productivity is measured by how well it will support a residential, commercial, industrial, or mixed use.

Optimum utility is achieved for some property if operated on an individual basis. Other property has greater utility if operated as part of a group of properties, or held and managed within an aggregate or portfolio of properties.

Utility is generally measured from a long-term perspective, ordinarily over the useful life of a property or group of properties. When a property may not have a readily discernible degree of utility at the date of valuation, full disclosure of the value definition, supporting data, and extent of special assumptions or limiting conditions is required.

**Valuation** - the process of estimating value.

**Valuation Date/ Date of Valuation** - the date as of which the Valuer's opinion of value applies. This date is often the date of inspection, but can be a date in the past (as in the case of RPT). A valuation date can never be in the future as value relies on knowing the circumstances of the property and all factors influencing value at the date of valuation.

**Valuation Ratio** - A factor wherein a value price serves as the numerator and financial, operating and physical data serve as the denominator.
