Robert Burns Woodward and the Art of Organic Synthesis Mary Ellen Bowden, Otto Theodor Benfey, 1992 This is the companion book to the former CHF traveling exhibit by the same name This multifaceted portrait of an extraordinary human being teacher and consummate organic chemist should inspire more young persons to pursue scientific careers provide chemists with deep insight into the creative mind of a legendary architect of molecules and enhance the public's understanding of chemistry and its research methods Journal of Chemical Education

Strategies and Tactics in Organic Synthesis Michael Harmata, 2013-07-29 A classic in the area of organic synthesis Strategies and Tactics in Organic Synthesis provides a forum for investigators to discuss their approach to the science and art of organic synthesis Rather than a simple presentation of data or a secondhand analysis we are given stories that vividly demonstrate the power of the human endeavor known as organic synthesis and the creativity and tenacity of its practitioners Firsthand accounts of each project tell of the excitement of conception the frustration of failure and the joy experienced when either rational thought or good fortune gives rise to the successful completion of a project This book series shows how synthesis is really done and we are educated challenged and inspired by these accounts which portray the idea that triumphs do not come without challenges We also learn that we can meet challenges to further advance the science and art of organic synthesis driving it forward to meet the demands of society in discovering new reactions creating new designs and building

molecules with atom and step economies that provide solutions through function to create a better world Presents state of the art developments in organic synthesis Provides insight and offers new perspective to problem solving Written by leading experts in the field

Organic Synthesis Via Examination of Selected Natural Products David J. Hart, 2011 Complete with problems and solutions this book is written for advanced graduate and undergraduate students to expose them to a variety of strategies for the synthesis of organic compounds This is done largely within the context of natural products synthesis but includes some unnatural products synthesis Multiple approaches to each group of synthesis targets are presented and the approaches are compared with one another with an eye on similarities and differences General problems in organic synthesis for example strategies for the preparation of 6 membered rings and 5 membered rings the importance of oxidation state the problem of acyclic diastereoselectivity the problem of controlling absolute stereochemistry the importance of functional group relationships are introduced early in the book and revisited throughout the text within the context of a variety of structurally unrelated natural products The book includes power point presentations to provide teachers who do not or do specialize in organic synthesis with access to well organized material they can use in the classroom with advanced students The book provides the reader with a somewhat historical overview of organic and natural products chemistry and spans synthetic methodology that dates from the 1940 s to present time It is written in a style that readers will find entertaining at times It also contains lots of useful references with complete titles provided This is much more helpful to the reader than the usual author journal year page information
