Habitable Planets For Man:

Habitable Planets for Man Stephen H. Dole, 1964 *Habitable Planets for Man*, 2007 *Habitable Planets for Man* examines and estimates the probabilities of finding planets habitable to human beings where they might be found and the number there may be in our own galaxy The author presents in detail the characteristics of a planet that can provide an acceptable environment for humankind itemizes the stars nearest the earth most likely to possess habitable planets and discusses how to search for habitable planets Interestingly for our time he also gives an appraisal of the earth as a planet and describes how its habitability would be changed if some of its basic properties were altered *Habitable Planets for Man* was published at the height of the space race a few years before the first moon landing when it was assumed that in the not too distant future human beings will be able to travel the vast distances to other stars More than forty years after its initial publication and to celebrate RAND's 60th Anniversary RAND is proud to bring this classic work back into print in paperback and digital formats

Planets for Man. (Based on the RAND Corporation Research Study, *Habitable Planets for Man*, by Stephen H. Dole.) Stephen H. Dole, Isaac Asimov, 1965 ***Habitable Planets for Man* [by] Stephen D. Dole** Stephen H. Dole, *Habitable Planets for Man* Dole, 1964-06-01 ***Planets for Man***, 2007 *Planets for Man* was written at the height of the space race a few years before the first moon landing when it was assumed that in the not too distant future human beings will be able to travel the vast distances to other stars The authors propose to determine on the basis of then current biological and cosmological knowledge whether there are other worlds where humans can survive or where human life may even now be flourishing This volume co authored by RAND researcher Stephen Dole and science fiction master Isaac Asimov certainly one of the more unusual co authorships in RAND's long history of research and publishing was based on a more technical treatise authored by Dole *Habitable Planets for Man* More than forty years after its initial publication and to celebrate RAND's 60th Anniversary RAND is proud to bring this classic work back into print in paperback and digital formats

Mathematical SETI Claudio Maccone, 2012-08-30 This book introduces the Statistical Drake Equation where from a simple product of seven positive numbers the Drake Equation is turned into the product of seven positive random variables The mathematical consequences of this transformation are demonstrated and it is proven that the new random variable N for the number of communicating civilizations in the Galaxy must follow the lognormal probability distribution when the number of factors in the Drake equation is allowed to increase at will *Mathematical SETI* also studies the proposed FOCAL Fast Outgoing Cyclopean Astronomical Lens space mission to the nearest Sun Focal Sphere at 550 AU and describes its consequences for future interstellar precursor missions and truly interstellar missions In addition the author shows how SETI signal processing may be dramatically improved by use of the Karhunen Lo ve Transform KLT rather than Fast Fourier Transform FFT Finally he describes the efforts made to persuade the United Nations to make the central part of the Moon Far Side a UN protected zone in order to preserve the unique radio noise free environment for future scientific use

Evo-SETI Claudio Maccone,2021-02-26 This book offers a vision of how evolutionary life processes can be modelled It presents a mathematical description that can be used not only for the full evolution of life on Earth from RNA to modern human societies but also the possible evolution of life on exoplanets thus leading to SETI the current Search for ExtraTerrestrial Intelligence The main premise underlying this mathematical theory is that the Geometric Brownian Motion GBM can be applied as a key stochastic process to model the evolution of life In the resulting Evo SETI Theory the life of any living thing a cell an animal a human a civilization of humans or even an ET civilization is represented by a b lognormal i e a lognormal probability density function starting at a precise instant b birth then increasing up to a peak time then decreasing to senility time and then continuing as a straight line down to the time of death Using this theory Claudio Maccone arrives at remarkable hypotheses on the development of life and civilizations the possibility of extraterrestrial life and when computers will take over the reins from us humans Singularity The book develops the mathematical Evo SETI Theory by integrating a set of articles that the author has published in various journals on Astrobiology and Astronautical Research **Dead Man's Planet and Five More Stories** R.
