

# Slope stabilisation solutions explained

## Gabion Baskets

Gabion baskets are box-shaped wire of galvanised steel mesh filled with rock or concrete. When stacked, they form a wall to stabilise roads constructed on a slope.

## Mesh Installation

Constructed from a composite 3D mat structure embedded in a steel wire mesh to provide tensile strength and erosion protection; used in conjunction with soil nails to reinforce slopes.

## Soil nails

Soil nails are steel bars grouted into holes drilled into the slope. Up to 12m long, they are used in combination with shotcrete or mesh to stabilise slopes.

## Rockfill embankment

Rockfill embankments rebuild and protect damaged slopes, using sized rocks to slow water flow and prevent erosion.

The solutions featured here are for example purposes only and not indicative of the specific design required for the pictured damaged slope. Slope stabilisation solutions are based on geotechnical assessments and the needs of each individual site.

Hsai-Yang Fang, 1990-12-31 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction
