Hanford And The Bomb:

Working on the Bomb S. L. Sanger, 1995 The history of the Hanford Engineering Works a site in eastern Washington that produced and separated plutonium for the Manhattan Project

Hanford and the Bomb S. L. Sanger, Robert W. Mull, 1989

Made in Hanford Hill Williams, 2021-06-22 On the eve of World War II news of an astonishing breakthrough filtered out of Germany Scientists there had split uranium atoms Researchers in the United States scrambled to verify results and further investigate this new science Ominously they soon recognized its potential to fuel the ultimate weapon one able to release the energy of an uncontrolled chain reaction By 1941 experiments led to the identification of plutonium but laboratory work generated the new element in amounts far too small to be useful Fearing the Nazis were on the verge of harnessing nuclear power President Franklin D Roosevelt gambled on an ambitious project to research and manufacture uranium and plutonium for military use As research continued engineers began to construct massive buildings in an isolated eastern Washington farming community Within two years Hanford became the world's first plutonium factory The incredibly complex operation was accomplished with a speed and secrecy unheard of today few involved knew what they were building But on August 9 1945 when the Fat Man fell on Nagasaki the workers understood their part in changing the world Hanford's role did not end there The facility produced plutonium throughout the Cold War Some was used in tests conducted halfway around the world Nuclear bombs were dropped on the Bikini and Enewetak Atolls profoundly impacting the Marshall Islands people and forever altering their way of life Through clear scientific explanations and personal reminiscences Hill Williams traces Hanford's role in the amazing and tragic story of the plutonium bomb

Atomic Spaces Peter Bacon Hales, 1999-04 Code named the Manhattan Project the detailed plans for developing an atomic bomb were impelled by urgency and shrouded in secrecy This book tells the story of the project's three key sites Oak Ridge Tennessee Hanford Washington and Los Alamos New Mexico

The Manhattan Project at Hanford Site Elizabeth Toomey, 2015-12-21 The Manhattan Project at Hanford Site describes the top secret effort undertaken during World War II to develop a weapon never imagined at Site W or Hanford Engineer Works one of three sites selected in the United States plus Los Alamos and Oak Ridge to research and produce weapons that were ultimately used to bomb Hiroshima and Nagasaki and end World War II It was a research and engineering feat of unimaginable proportion and the total project cost for all three sites was 2.1 billion an unthinkable amount for a country that was coming out of the Great Depression It is a story of gumption resolve tenacity patriotism pride and selflessness for the thousands of people who worked multiple shifts seven days a week in a hot dry and desolate desert never knowing what they were working on It is a tribute to American resolve in the face of overwhelming adversity

The Hanford Project. An Evaluative Analysis of how Administration, Especially Public Welfare Met the Unusual Situation Created in the Community by the Making of the Atomic Bomb in Hanford, Washington, During World War II. Eleanor Rollins, 1947

Reports [declassified Versions] to the U.S. Atomic Energy Commission on Nuclear Power

Reactor Technology U.S. Atomic Energy Commission,1953 **In the Matter of J. Robert Oppenheimer** U.S. Atomic Energy Commission,1954 **In the Matter of J. Robert Oppenheimer** U.S. Atomic Energy Commission,1971 This publication brings back into print the complete testimony as released by the AEC in 1954 of the hearing called to determine if Oppenheimer was a security risk But the importance of the document goes far beyond the considered question of whether to terminate his security clearance The testimony spans Oppenheimer s personal life from the 1920s to the 1950s reflects the broader political and scientific stirrings of this period and raises issues that remain central today The document develops all these themes it is a compelling human portrait an eyewitness history of some of the most important events of the century and a flashback to one of the points of origin of our present concerns with the arms race and government decision making conscientious dissent and national loyalty The testimony is inherently dramatic as a recent play of the same title has shown In the title role Oppenheimer reveals himself as a man of Hamletlike complexity by turns humble and arrogant naive and knowing candid and reserved witty and deadly serious His final greatness makes itself felt in that joining of resignation to resolution with which he accepts the adverse outcome of his case to him inevitable and its tragic implications for the nation As background the testimony carries the reader through a number of settings the revolution in physics of the late 1920s the depression the rise of Nazism the Spanish Civil War and the American left s fascination with another sort of revolution the war years the building of the atomic bomb and the decision to use it the simultaneous opening of the U N and the Cold War and the failure to bring atomic weapons under international control and the heyday of McCarthyism with its patriotic hysteria suspicion and repression The abiding pertinence of this document is obvious It is addressed to a nation loudly debating ABM and MIRV deployment leftist politics military industrial governmental power the question of loyalty the limits of dissent and the right of a man to define for himself in conscience what the national interest is or should be as Oppenheimer did in opposing the creation of the hydrogen bomb Among those called to give witness in these matters are Fermi von Neumann Bethe DuBridge Rabi Teller Gen Groves McCloy Lilienthal Karl Compton Bush and Conant For the first time the transcript has been provided with an index **Hanford Nuclear Reservation** Daniel Clark,2021-05-17 The Manhattan Project at the Hanford Nuclear Reservation near Richland Washington produced the plutonium for the atomic bomb that destroyed Nagasaki Japan during World War II The federal government was continuing to make nuclear weapons materials at Hanford in 1985 when a series of citizen inquiries and protests began that resulted in the termination of all nuclear weapons production there and the disclosure of the site s history of nuclear contamination **Programmatic EIS for Stockpile Stewardship and Management** ,1996 **Hanford's Battle with Nuclear Waste Tank SY-101** Chuck Stewart,2006 The nuclear reactors and separation plants at the Hanford Site in Washington State made the plutonium for the bombs dropped on Japan in 1945 Plutonium production expanded during the Cold War and continued into the late 1980s leaving Hanford with a majority of the national inventory of high level radioactive waste stored in its underground tanks This book tells the

story of one specific tank the million gallon double shell tank 241 SY 101 in Hanford s 200 West Area SY 101 was a dominating element in DOE waste management for the last decade of the 20th century The possibility of a flammable gas burn in SY 101 was acknowledged as the safety issue of highest priority in the entire DOE complex during the early 1990s Uncontrolled crust growth demanded another large scale emergency effort in the late 1990s that finally allowed the tank to return to service in September 2001 It received its first waste as an active tank in November 2002 The experience spawned a legacy of inspired engineering tight project discipline and supportive teamwork that still affects the Hanford culture today This narrative presents the whole SY 101 story from the viewpoint of those who lived through it If it makes people who work in nuclear waste management pause and worry a little when funding scheduling or political pressures curtail creativity and prudence the book will have served its purpose [Something Extraordinary](#) Robert L. Ferguson,C. Mark Smith,2019-07-23 Finally a concise but comprehensive narrative of the geopolitics and atomic research that led to the creation of the Manhattan Project the American effort to develop and deploy the atomic bomb during World War II Written by two award winning authors who together have more than a century of direct experience with the subject this book is unlike any other A key component of the Manhattan Project was the development of the massive Hanford Site where the plutonium used in America s atomic bombs was produced The book celebrates the 75th anniversary of the date in 1944 when the first production reactor the B Reactor went critical and the plutonium it produced helped win the war The year 2019 is also the 35th anniversary of the startup of WNP 2 now the Columbia Generating Station the only nuclear power reactor to be built by the Washington Public Power Supply System Also this year is the 30th anniversary of the signing of the Tri Party Agreement which governs the cleanup of the Hanford Site Hanford and the B Reactor played an important role in the Cold War and in the growth and subsequent economic fortunes of the nearby Tri Cities communities whose economies were directly affected by events at Hanford When the plutonium production reactors and chemical separation facilities were deactivated the community sought to find new missions and uses for the Hanford Site By the 1980s it was clear that Hanford s mission had finally changed from production to cleanup ushering in a whole new set of challenges and opportunities that continue to this day It s all here from the history of atomic research to the continuing efforts to clean up the Hanford Site Written for non technical readers who may be first time visitors to the Tri Cities or the B Reactor now part of the Manhattan Project National Historic Park or for those who have lived and worked around the Hanford Site and may want a brief and easy to read history of their community **U.S. Geological Survey Water-supply Paper** ,1982 [A Richer Harvest](#) Craig Wollner,1999 From pioneer journals to union tracts and cyberpunk fiction the selections gathered here reveal the lives of the Northwest s working people and insights into the nature of work in the region [Terra Pacifica](#) Paul W. Hirt,1998 Ten widely recognized historians from the United States and Canada present thought provoking insights about society culture and change in the great resource laden Northwest Essays examine early Spanish exploration of the Northern coast the long term relationship of

a fragile Canadian union with its powerful southern neighbor regional novelists and literature important aspects of black and white immigration the iconography of nuclear energy and the continuing interaction of the region s many Indian reservations with the dominant society s economic conservation and legal institutions

Picturing the Bomb Rachel Fermi, Esther Samra, 1995 The compelling photographs from the Manhattan Project by turns specific abstract dramatic and surreal offer a multifaceted look at history Photographs of landscapes and of construction of scientific experiments and their results are framed against official portraits and casual snapshots

Washington Comes of Age David Hodges Stratton, 1992 Nine noted regional and national experts here explore Washington s coming of age Essays delve into the frustration of territorial residents with the presidency of Abraham Lincoln Washington s struggle for statehood the state s constitutional convention suffragist Abigail Scott Duniway s fight for women s rights and the role of the Hanford nuclear reservation in American history Former governor and senator Daniel J Evans political correspondent Lou Cannon and Gordon Hirabayashi who protested the World War II internment of Japanese Americans in a highly publicized legal case provide their personal reflections upon recent state history Washington Comes of Age continues the Washington State University Press s Pettyjohn series of publications examining essential aspects of Pacific Northwest history

Manhattan Project at Hanford Site Elizabeth Toomey, 2015-12-21 The Manhattan Project at Hanford Site describes the top secret effort undertaken during World War II to develop a weapon never imagined at Site W or Hanford Engineer Works one of three sites selected in the United States plus Los Alamos and Oak Ridge to research and produce weapons that were ultimately used to bomb Hiroshima and Nagasaki and end World War II It was a research and engineering feat of unimaginable proportion and the total project cost for all three sites was 2.1 billion an unthinkable amount for a country that was coming out of the Great Depression It is a story of gumption resolve tenacity patriotism pride and selflessness for the thousands of people who worked multiple shifts seven days a week in a hot dry and desolate desert never knowing what they were working on It is a tribute to American resolve in the face of overwhelming adversity

Racing for the Bomb Robert Stan Norris, 2002 Follows the World War II race to build the atomic bomb while profiling its top commander documenting how Colonel Groves organized the collection of the necessary funds and materials while orchestrating solutions to thousands of technical problems
