*Health and Health Care in Developing Countries* Peter Conrad, Eugene B. Gallagher, 2011 The volume covers a range of areas central Africa Nigeria Singapore Taiwan Indonesia Nepal China United Arab Emirates Oman and Mexico and a broad scope of topics from emergency care the AIDS epidemic and women s health care to public health programs and national health care policies Contributors address the central question of whether health systems in developing areas should emphasize the role of clinical medicine and individual physicians or community and preventive medical resources The major health problems faced by these societies inadequate sanitation infectious disease high infant child mortality and a lack of family planning indicate the greater need for health educators and public health workers despite many poor nations desire for Western doctors Other topics that are examined include the process of seeking medical aid the relationship between traditional and modern medicines medical education hospital care and communication between doctors and patients in developing countries and the relevance and application of sociology in Third World settings This volume seeks to draw attention to the significance of medical sociology for understanding Third World health problems and to show how examining developing societies may necessitate reframing or modifying some Western sociological notions Health Care Systems in Developing Countries in Asia Christian Aspalter, Kenny Teguh Pribadi, Robin Gauld, 2017-07-14 For the last two decades major Asian economies have successfully kept their economic growth momentum going Now as these economies are entering a new phase of economic growth more attention is being paid to their respective states of social development especially the provision and the expansion of social security and in particular health care Academic study of the development of health care in developing countries has been for the most part neglected by the literature and in depth country case studies that are directly comparable on a one to one basis have not yet been conducted in a systematic manner This book volume also proposes a new stance on health policy and the health care policy paradigm one that focuses on saving lives from premature death as well as illness accidents misery and poverty based on the normative theory of developmental social policy DSP This groundbreaking book will therefore serve as a valuable reference volume for health policy social policy and public policy experts social development experts health and development economists health sociologists social workers government administrators as well as other medical and health professionals and academics **Financing Health Services in Developing Countries** John S. Akin, Nancy Birdsall, David M. De Ferranti, 1987-01-01 This report discusses several different approaches that support reforming health care services in developing countries For some time now health care services have been supported by government funds As demands for improving health care services continue to increase additional demands will be placed on governments to respond This however will not be easy Slow economic growth and record budget deficits in the 1980 s have forced reductions in public spending Alternative approaches to finance health care services are needed Such possible changes could involve decentralization of federal government involvement the promotion of nongovernment

involvement the imposition of user fees and establishing health insurance Finally the role of the Bank in pursuing new financing strategies is discussed **Making Health Services More Accessible in Developing Countries** H.

Uchimura,2009-09-16 Health is increasingly a critical concern in the context of development This book examines the function of health systems particularly the key factors finance human resources pharmaceuticals public facilities and stresses the importance of improving access to health services in developing countries Strengthening Health Services in Developing Countries Through the Private Sector Charles C. Griffin,1989 This paper discusses the nature of private sector involvement in health service delivery in developing countries the potential for expanding it and areas where health sector policy goals might benefit from greater private participation It takes the wide and rarely occupied middle ground between the extreme pro public and pro private approaches to health care delivery A simple distinction between the private and public sectors is applied anything not done by the government itself is treated as part of the private sector The area of greatest potential for private sector involvement in developing countries is in hospital care It would require however the development of third party payment systems and a re evaluation in areas where governments are most heavily involved This would allow governments to retreat to the simpler and more appropriate tasks of financing and regulating health service delivery Governments probably cannot extract themselves completely from direct provision of curative care especially in rural areas Greater reliance on the private sector to supply remaining government facilities however can stimulate the development of more diversified private markets and supply lines in rural areas *Improving Health Service Delivery in Developing Countries* David H. Peters,2009 Reliable information on how health service strategies affect the poor is in short supply In an attempt to redress the imbalance *Improving Health Service Delivery in Developing Countries* presents evidence on strategies for strengthening health service delivery based on systematic reviews of the literature quantitative and qualitative analyses of existing data and seven country case studies The authors also explore how changes in coverage of different health services affect each other on the national level Finally the authors explain why setting international targets for health services has been not been successful and offer an alternative approach based on a specific country s experience The book s findings are clear and hopeful There are many ways to improve health services Measuring change and using information to guide decisions and inform stakeholders are critically important for successful implementation Asking difficult questions using information intelligently and involving key stakeholders and institutions are central to the learning and doing practices that underlie successful health service delivery **Oxford Textbook of Primary Medical Care** Roger Jones (Prof.),2005

**The underlying dynamics of health care systems in developing countries: Health policy, planning and the Impact of Social Economic Status (SES) on Health Disparities** Mukasa Aziz Hawards,2014-06 The impact of health policy and planning are tremendous remedies through which the health care systems derive their primary potentials in the health promotion ventures and interventions The programs designed in the health arena are tentatively equivocal and

submissive to the implications influenced by the policy development criteria and much more open to the planning process Every day healthcare organizations are faced with crucial decisions about improving their systems of care and a lack of critical information to guide them The research they need should be designed to help them provide better care to the patients in their organization effectively and efficiently Where does the Medicaid and the medical care strategies as pursued in the United States of America have their remedies through policy structure and together with the political culture associated to the system or perhaps how possible is it that japan has the highest life expectancy co efficient The book is more of a fact file as results were generated by the health care research from suitable sectors and comparisons derived from the well off health care states mainly from the OECD fraternity as these bare differences due to policy even when their economic bases differ by small percentages This work should be helpful in directing and providing us with traceable landmarks to follow while seeking to avert the challenges that weaponize the communicable disease prevalence in the society for both the developed and the low developed states

*Going Universal* Daniel Cotlear,Somil Nagpal,Owen Smith,Ajay Tandon,Rafael Cortez,2015-09-25 The quest for universal health coverage UHC has gathered real momentum over the past decade with countries on every continent now taking part This is welcome news since a lack of universal coverage means that hundreds of millions of people around the world either do not get the health care services they need or they have to pay dearly for them often falling into poverty as a result But the UHC agenda also poses an enormous challenge to policy makers across the globe and many countries are eager to learn from the experiences of others as they undertake the long journey toward UHC

*Going Universal How 24 Developing Countries Are Implementing Universal Health Coverage Reforms from the Bottom Up* draws on a wealth of new evidence to help enrich the global knowledge base on UHC It provides a synthesis of UHC reform programs that placed a special focus on expanding coverage in ways inclusive of the poor The main objective was to document and analyze their experiences based on a systematic data collection effort that sought to capture in great detail how they have been implementing UHC reforms The main chapters offer an in depth analysis of how countries are addressing five key challenges covering people expanding benefits managing money improving the supply of health care services and strengthening accountability The UHC reform programs described in the volume are new massive and transformational Most were launched during the past decade and together they now cover more than 2 billion people But most importantly the authors find that the programs are fundamentally changing the way health systems operate offering the potential to achieve greater equity and better results for the money spent The authors identify key risks that lie ahead as well as an emerging agenda that requires more country and global learning Overall this book offers those contributing to the achievement of UHC worldwide a valuable new resource to help chart a way forward

**Health Insurance in Developing Countries** Aviva Ron,Brian Abel-Smith,Giovanni Tamburi,1990 This volume describes the evolution of the social security approach to health insurance

from the first initiatives in Europe to the adaptation of the concept in other parts of the world It then focuses on benefits and financing and on the inter relationship between the social security system and government agencies particularly those dealing with health A concise review of the mechanisms involved in both the delivery of health services and providing payment is followed by an analysis of current administrative issues The second part contains country profiles of health care programmes in **Health Care Systems in Developing and Transition Countries** Diana Pinto Masís, Peter C. Smith, 2009 Health policy is a central preoccupation of many if not all developing countries This book presents a selection of ten studies that illustrate the powerful tool that carefully conducted research can offer policy makers seeking to address common health policy issues The studies included in this book illustrate the major gains to patients and citizens that can accrue from research efforts stimulating research capacity in developing countries Although many of the challenges confronting health systems are universal it is often the case that research results derived from developing countries can be misleading when applied to the low or middle income settings This insightful book will be a valuable research tool for academics researchers and policy makers in economics and health Publisher's description Health Sector Reform in Developing Countries Peter A. Berman, 1995 In Mexico City or Nairobi or Manila a young girl in one part of the city is near death with measles while not far away an elderly man awaits transplantation of a new kidney How is one denied a cheap simple and effective remedy while another can command the most advanced technology medicine can offer Can countries like Mexico Kenya or the Philippines with limited funds and medical resources find an affordable effective and fair way to balance competing health needs and demands Such dilemmas are the focus of this insightful book in which leading international researchers bring together the latest thinking on how developing countries can reform health care The choices these poorer countries make today will determine the pace of health improvement for vast numbers of people now and in the future Exploring new ideas and concepts as well as the practical experiences of nations in all parts of the world this volume provides valuable insights and information to both generalists and specialists interested in how health care will look in the world of the twenty first century **Encyclopedia of the Developing World** Thomas M.
