

# COGNITIVE DEVELOPMENT

Cognitive development is the mental process through which how humans acquire, make sense of, and use information.

## DEFINITION

As the brain matures, cognitive development becomes more complex. Cognitive development begins before birth and advances right through to the mid-20s, involving increasingly more complex mental processes such as abstract thinking, innovation, and scientific reasoning. After the mid-20s, we can still learn and develop, but cognitive development plateaus.

## EXAMPLES

**Primary circular reactions (1-4 months):** Babies start to follow objects as they move. They can track a ball rolling along the floor.

**Development of inductive reasoning (7-11 years):** Children start to make generalizations from personal experiences.

**Metacognition (11+ years):** People begin to reflect upon their own thinking processes, helping them to enhance their learning skills and speed.

## **Functional Approaches To Cognitive Development:**

A Functional Theory of Cognition Norman H. Anderson, 2014-03-05 A unified general theory of functional cognition is presented in this book Its generality appears in the titles of the 13 chapters listed below Its unity appears in the effectiveness of the same methods and concepts across all of these areas Generality and unity both stem from the foundation axiom of purposiveness The axiom of purposiveness has been made effective through capability for functional measurement of values which embody the goal directed character of purposiveness This measurement capability is based on the general cognitive algebra established in information integration theory Functional theory can thus be made precise and effective near the level of everyday phenomenology The book is written at a relatively simple level directed at readers in every field of psychology Among its characteristics are self sufficient theory near the level of everyday phenomenology foundation on structure of the internal world and solid grounding in experimental analysis
