**Symbolic Logic** David Agler, 2012-12-16

Brimming with visual examples of concepts derivation rules and proof strategies this introductory text is ideal for students with no previous experience in logic

Symbolic Logic Syntax Semantics and Proof introduces students to the fundamental concepts techniques and topics involved in deductive reasoning

Agler guides students through the basics of symbolic logic by explaining the essentials of two classical systems propositional and predicate logic

Students will learn translation both from formal language into English and from English into formal language how to use truth trees and truth tables to test propositions for logical properties and how to construct and strategically use derivation rules in proofs

This text makes this often confounding topic much more accessible with step by step example proofs chapter glossaries of key terms hundreds of homework problems and solutions for practice and suggested further readings

Linear Functional Equations. Operator Approach Anatolij Antonevich, 1996-01-26

In this book we shall study linear functional equations of the form  $m \sum_{k=1}^n a_k U(x) + f(x) = 0$  where  $U$  is an unknown function from a given space  $F(X)$  of functions on a set  $X$

$Q_k: X \rightarrow X$  are given mappings  $a_k$  and  $f$  are given functions

Our approach is based on the investigation of the operators given by the left hand side of equation 1

In what follows such operators will be called functional operators

We will pay special attention to the spectral properties of functional operators first of all to invertibility and the Noether property

Since the set  $X$  the space  $F(X)$  the mappings  $Q_k$  and the coefficients  $a_k$  are arbitrary the class of operators of the form 1 is

very rich and some of its individual representatives are related with problems arising in various areas of mathematics and its applications. In addition to the classical theory of functional equations, among such areas one can indicate the theory of functional differential equations with deviating argument, the theory of nonlocal problems for partial differential equations, the theory of boundary value problems for the equation of a vibrating string and equations of mixed type, a number of problems of the general theory of operator algebras and the theory of dynamical systems, the spectral theory of automorphisms of Banach algebras and other problems.
