Using FrontPage 2000

Some Background. Now that you have seen at least a little HTML you should have gained an appreciation for why it would be much nicer to be able to develop **web pages** using something resembling Microsoft Word. The word **web** is often used to denote a collection of individual pages that at least have interconnecting hyperlinks. Fortunately, Microsoft has developed such a package and it is called FrontPage. In the 2000 edition they seemed to have worked out many of the difficulties that existed with earlier versions. In addition, it really has a nice variety of features to make development much easier.
