book is structured in four parts

Fluoropolymers 1 Gareth Hougham,1999-10-31 The fluorine atom by virtue of its electronegativity size and bond strength with carbon can be used to create compounds with remarkable properties Small molecules containing fluorine have many positive impacts on everyday life of which blood substitutes pharmaceuticals and surface modifiers are only a few examples Fluoropolymers too while traditionally associated with extreme high performance applications have found their way into our homes our clothing and even our language Much progress has been made in understanding the sometimes confounding properties of fluoropolymers Computer simulation is now contributing to this with new fluorine force fields and other parameters bringing realistic prediction within reach of the practicing physical chemist Fluoropolymers 1 Synthesis and Fluoropolymers 2 Properties attempt to bring together in one place the chemistry physics and engineering properties of fluoropolymers The collection was intended to provide balance between breadth and depth with contributions ranging from the introduction of fluoropolymer structure property relationships to reviews of subfields to more focused topical reports

Fluoropolymers 1 Gareth G. Hougham,Patrick E. Cassidy,Ken Johns,Theodore Davidson,2006-04-11 The fluorine atom by virtue of its electronegativity size and bond strength with carbon can be used to create compounds with remarkable properties Small molecules containing fluorine have many positive impacts on everyday life of which blood substitutes pharmaceuticals and surface modifiers are only a few examples Fluoropolymers too while traditionally associated with extreme hi performance applications have found their way into our homes our clothing and even our language A recent American president was often likened to the tribology of PTFE Since the serendipitous discovery of Teflon at the Dupont Jackson Laboratory in 1938 fluoropolymers have grown steadily in technological and marketplace importance New synthetic fluorine chemistry new processes and new apprec tion of the mechanisms by which fluorine imparts exceptional properties all contribute to accelerating growth in fluoropolymers There are many stories of harrowing close calls in the fluorine chemistry lab especially from the early years and synthetic challenges at times remain daunting But fortunately modern techniques and facilities have enabled significant strides toward taming both the hazards and synthetic uncertainties In contrast to past environmental problems associated with fluorocarbon refrigerants the exceptional properties of fluorine in polymers have great environmental value Some fluoropolymers are enabling green technologies such as hydrogen fuel cells for automobiles and oxygen selective membranes for cleaner diesel combustion

Monomers, Polymers and Composites from Renewable Resources Mohamed Naceur Belgacem, Alessandro Gandini, 2011-10-10

The progressive dwindling of fossil resources coupled with the drastic increase in oil prices have sparked a feverish activity in search of alternatives based on renewable resources for the production of energy Given the predominance of petroleum and carbon based chemistry for the manufacture of organic chemical commodities a similar preoccupation has recently generated numerous initiatives aimed at replacing these fossil sources with renewable counterparts In particular major efforts are being conducted in the field of

polymer science and technology to prepare macromolecular materials based on renewable resources The concept of the bio refinery viz the rational exploitation of the vegetable biomass in terms of the separation of its components and their utilisation as such or after suitable chemical modifications is thus gaining momentum and considerable financial backing from both the public and private sectors This collection of chapters each one written by internationally recognised experts in the corresponding field covers in a comprehensive fashion all the major aspects related to the synthesis characterization and properties of macromolecular materials prepared using renewable resources as such or after appropriate modifications Thus monomers such as terpenes and furans oligomers like rosin and tannins and polymers ranging from cellulose to proteins and including macromolecules synthesized by microbes are discussed with the purpose of showing the extraordinary variety of materials that can be prepared from their intelligent exploitation Particular emphasis has been placed on recent advances and imminent perspectives given the incessantly growing interest that this area is experiencing in both the scientific and technological realms Discusses bio refining with explicit application to materials Replete with examples of applications of the concept of sustainable development Presents an impressive variety of novel macromolecular materials *Loose-leaf Version for Principles of Life* David M. Hillis, David E. Sadava, Richard W. Hill, Mary V.
