Wheater's Functional Histology Barbara Young (Ph. D.),2006-01-01 CD contains 800 colour photographs electron micrographs and diagrams *The Structure and Function of Plastids* Robert R. Wise,J. Kenneth Hooper,2007-09-07 The Structure and Function of Plastids provides a comprehensive look at the biology of plastids the multifunctional biosynthetic factories that are unique to plants and algae Fifty nine international experts have contributed 28 chapters that cover all aspects of this large and diverse family of plant and algal organelles [Progress in Cell Cycle Research](#) Laurent Meijer,Silvana Guidet,Lee Vogel,2012-12-06 Now in its second year Progress in Cell Cycle Research was conceived to serve as an up to date introduction to various aspects of the cell division cycle Although an annual review in any field of scientific investigation can never be as current as desired especially in the cell cycle field we hope that this volume will be helpful to students to recent graduates considering a del1iation in subject and to investigators at the fringe of the cell cycle field wishing to bridge frontiers An instructive approach to many subjects in biology is often to make comparisons between evolutionary distant organisms If one is willing to accept that yeast represent a model primitive eukaryote then it is possible to make some interesting comparisons of cell cycle control mechanisms between mammals and our little unicellular cousins By and large unicellular organisms have no need for intracellular communication With the exception of the mating phenomenon in *S cerevisiae* and perhaps some nutritional sensing mechanisms cellular division of yeast proceeds with complete disregard for neighbourly communication Multicellular organisms on the other hand depend entirely on intracellular communication to maintain structural integrity Consequently elaborate networks have evolved to either prevent or promote appropriate cell division in multicellular organisms Yet as described in chapter two the rudimentary mechanisms for fine tuning the cell division cycle in higher eukaryotes are already apparent in yeast

THE BASIS OF DIVINE CREATION: RECONCILING SCIENCE WITH SCRIPTURE Ismail,2025-09-02 This book sets out to explore a profound and timely connection between intelligent design and Quranic creationism In recent years scientific discoveries in fields like cosmology biology and information theory have increasingly challenged the materialistic view that life and the universe arose by blind chance and undirected processes Instead these discoveries point toward order purpose and design features that suggest the involvement of a higher intelligence At the same time the Quran offers a view of creation that is purposeful structured and deeply compatible with the core ideas behind intelligent design This book does not aim to promote religion through faith alone nor does it abandon science for scripture Rather it builds a thoughtful and reasoned bridge between what modern science is uncovering and what the Quran has long proclaimed that life and the universe are the result of deliberate creation Through this exploration we invite both believers and skeptics to reconsider the assumptions of materialism and to see how intelligence purpose and design provide a richer and more coherent explanation of reality
