**Australian Megafauna** Steve Webb,2013-02-27 Extinctions have always occurred and always will so what is so surprising about the megafauna extinctions They were caused by humans and were the first of many extinctions that eventually led to the extinction of the Moa Steller s Sea Cow the Dodo Great Auk and countless other species great and small all attributed to human agency Therefore the megafauna were humans first great impact on the planet There is now an increasing realization that the blitzkrieg view of these extinctions may have been wrong A growing body of evidence and long term field work is beginning to show that at least Australia s megafauna did not succumb to human agency not because humans probably did not hunt the odd animal but because the an infinitely more logical reason lies in the climatic conditions of the Quaternary Ice Ages and the affect they had on continental geography environment climate and most importantly the biogeography of the megafauna This book presents the evidence of this theory demonstrating the biogeographic approach to Australia s megafauna extinction Written clearly to benefit a diverse level of readers from those with a passing interest to professionals in the field Examines future climate change and its effects on the planet by looking at examples buried in the past Presents

Brown,2001 *The Evolutionary Science of Extraterrestrial Life* approaches the evolution of simple complex and intelligent life forms and technological cultures anywhere in the universe from a perspective that is independent of any particular environment whether that environment is the rocky surface of inner planets like Earth or Mars the atmosphere of a giant gas planet like Jupiter moons like our own or Saturn s Titan or a gaseous nebula A series of questions must here be asked What could such a science tell us about simple life forms about complex about intelligent life forms and technological civilizations What physical social and psychological

characteristics would an intelligent life form have irregardless of how or where it evolved What are the choke points any environment must challenge and defeat if simple life forms are to evolve into complex forms or complex into intelligent forms Once intelligent life evolves how inevitable is its rise to technology What lies beyond technology as genetic and cyborg frontiers are invaded Most approaches to these questions involve probabilities in the spirit of the Drake equation or get tangled in the specifics of Earthlike environments the search for water or the specifics of human evolution Evolutionary Science simply bypasses such discussions It is a science one applies to an environment any environment Evolutionary Science proposes a series of nine fundamental scientific principles based solidly on physics biological evolution and a precise definition of intelligence Four new Imperatives are proposed that not only discipline but revolutionize any approach to defining the psychological profile of intelligent life Thebook concludes with the implications this new science has for a number of critical issues the nature of Life Artificial Intelligence biochemistries the potential for contact a Galactic Society and the God factor
