The Ecology of Bird Communities: Processes and variations John A. Wiens,1992 **The Ecology of Bird Communities: Processes and variations** John A. Wiens,1989 The two volumes of John Wiens Ecology of Bird Communities are already recognised as having applications and importance beyond the study of birds to the wider study of ecology in general The books contain a detailed synthesis of our current understanding of the patterns of organisation of bird communities and of the factors that may determine them drawing from studies from all over the world The author however does more than simply review recent findings in bird community ecology By emphasizing how proper logic and methods have or have not been followed and how different viewpoints have developed historically and have led to controversy he extends the scope of these books far beyond the study of birds Volume 1 Foundations and Patterns explores why avian community ecologists ask the questions they do and what philosophical and methodological approaches they have used to answer such questions Most of the book is devoted to a critical evaluation of what is known about the nature and organisation of bird communities Volume 2 Processes and Variations discusses the way in which bird community patterns have been interpreted This volume examines how the complexity and variability of natural environments may influence efforts to discern and understand the nature of these communities Graduate students and professionals in avian biology and ecology will find these volumes a valuable stimulus and guide to future field studies and theory development [The Ecology of Bird Communities](#) John A. Conservation and Management of Neotropical Migrant Landbirds in the Northern Rockies and Great Plains

David S. Dobkin, R. Gerald Wright, 1994 Distributed by the University of Nebraska Press for the University of Idaho Press Presents the population status current management and conservation of 144 species of migratory landbirds that breed within a vast area that includes all of Montana and North Dakota the northern half of Idaho the northernmost portions of Wyoming and South Dakota and the easternmost slice of Washington **Pattern and Process in Macroecology** Kevin Gaston, Tim Blackburn, 2008-04-15 Issues of scale have become increasingly important to ecologists This book addresses the structure of regional large scale ecological assemblages or communities and the influence this has at a local small scale level This macroecological perspective is essential for the broader study of ecology because the structure and function of local communities cannot be properly understood without reference to the region in which they are situated The book reviews and synthesizes the issues of current importance in macroecology providing a balanced summary of the field that will be useful for biologists at advanced undergraduate level and above These general issues are illustrated by frequent reference to specific well studied local and regional assemblages an approach that serves to relate the macroecological perspective which is perhaps often difficult to comprehend to the everyday experience of local sites Macroecology is an expanding and dynamic discipline The broad aim of the book is to promote an understanding of why it is such an important part of the wider program of research into ecology Summarises the current macroecological literature Provides numerous examples of key patterns Explicitly links local and regional scale processes Exploits detailed knowledge of one species assemblage to explore broad issues in the structuring of biodiversity *Biodiversity and Conservation: Causes and consequences of biodiversity loss 1 :*

development, habitat loss and invasive species Richard J. Ladle, 2009 Although biodiversity is a relatively new coinage scientists have been studying the subject it describes long before the word's first appearance in the language in the mid 1980s In 1973 for instance the UK Systematics Association held a symposium on The Changing Flora and Fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities a conclusion also reached said the symposium at a meeting of the Linnaean Society some forty years earlier By 1980 the Global 2000 Report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity Indeed especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement Indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies It is increasingly taught and studied in universities and other research institutions around the world Addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature Biodiversity and Conservation is a new title in the Routledge series Critical Concepts in the Environment Edited by Richard Ladle of Oxford University's Centre for the Environment this new Major Work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates

Data Analysis in Community and Landscape Ecology R. H. Jongman, C. J. F. Ter Braak, O. F. R. van Tongeren, 1995-03-02 Ecological data has several special properties the presence or absence of species on a semi quantitative abundance scale non linear relationships between species and environmental factors and high inter correlations among species and among environmental variables The analysis of such data is important to the interpretation of relationships within plant and animal communities and with their environments In this corrected version of Data Analysis in Community and Landscape Ecology without using complex mathematics the contributors demonstrate the methods that have proven most useful with examples exercises and case studies Chapters explain in an elementary way powerful data analysis techniques such as logic regression
