

EXPLORING THE MICROSCOPE

A Journey into the Hidden World Beneath the Lens

Biology I & II

Objectives

Students will:

- Identify the parts of the microscope
- Focus using each of the lenses
- Observe microscopic specimens
- Use a stereo microscope
- Explore microscopic organisms

Materials

- Compound Light Microscope
- Prepared letter "a" slide
- Prepared slides: common things
- Multicolored thread slides
- Amoeba and Paramecium slides
- Stereo microscope

Part I - How to Focus the Microscope

1. Place the slide of the "letter a" on the stage of the light microscope so that the letter is over the hole and is right side up as you look at it with the naked eye.

2. Use the scanning objective and then use the coarse knob to focus.

3. Draw the "a" as it appears in your viewing field. Draw it to scale, it should take up as much space in the circle as it does when viewed. Draw exactly as it appears and use shading.

4. Switch to the low power objective. You should hear it click into place. Look in the microscope, the "a" should still be visible, but it will be bigger and it might be blurry. Use the coarse knob to bring it back into focus.

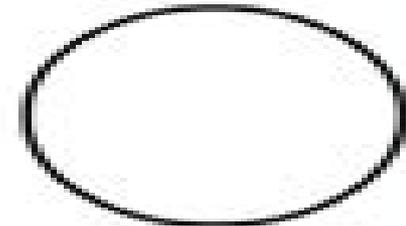

You may also want to move the slide to re-center the "a". Draw the "a" to scale in the circle.

5. Switch to the high power objective (this is the longest one). Now when you look into the microscope you probably won't see the "a."

At this magnification, you are just seeing a part of the "a". You will need to focus, but only use the fine adjustment knob. You should only need to rotate it a little bit to bring the slide back into focus, so turn the knob slowly.

*If you cannot find the "a" at high power. You may need to start over with the scanning objective.

Scanning Power (40x)

Low Power (100x)

High Power (400x)
