**A Mind So Rare** Merlin Donald, 2001 Donald psychology Queen's University Canada challenges the prevailing view that seeks to explain away human consciousness and presents a theory on the origins of the modern mind He describes the cultural and neuronal forces that power human modes of awareness and proposes that the human mind is a hybrid product of the interweaving of the brain with an invisible symbolic web of culture to form a distributed cognitive network Using evidence from brain and behavioral studies of humans and animals he explains how an expansion of consciousness transcends the limitations of the mammalian mind and elaborates the foundations of self evaluation and self reflection c Book News Inc

*Evolution of Mind, Brain, and Culture* Gary Hatfield, Holly Pittman, 2013-05-28 Descartes boldly claimed I think therefore I am But one might well ask Why do we think How When and why did our human ancestors develop language and culture In other words what makes the human mind human Evolution of Mind Brain and Culture offers a comprehensive and scientific investigation of these perennial questions Fourteen essays bring together the work of archaeologists cultural and physical anthropologists psychologists philosophers geneticists a neuroscientist and an environmental scientist to explore the evolution of the human mind the brain and the human capacity for culture The volume represents and critically engages major theoretical approaches including Donald's stage theory Mithen's cathedral model Tomasello's joint intentionality and Boyd and Richerson's modeling of the evolution of culture in relation to climate change No recent publication combines this breadth of evidential and theoretical perspective The essays range in topic from the macroscopic the evolution of social cooperation to the microscopic examining genetic data to infer evolutions in brain structure and function and from the ancient paleoanthropological reconstructions of hominin cognitive abilities to the modern including modern hominin's similarities to our primate cousins Considered together these essays constitute a fascinating detailed look at what makes us human PMIRC volume 5

[The Evolution of Mind](#) Denise D. Cummins, Colin Allen, 1998 Our understanding of the human mind has radically changed in recent years from the unified mind once envisioned by Rene Descartes over three hundred years ago to a new understanding of mind as a set of specialized cognitive components gradually accumulated in our evolutionary past As a result many scientists and philosophers now believe that our minds emerged out of the same type of evolutionary processes that have shaped our bodies In *The Evolution of Mind* outstanding figures on the cutting edge of evolutionary psychology follow clues provided by current neuroscientific evidence to illuminate many puzzling questions of human cognitive evolution With contributions from psychologists ethnologists anthropologists and philosophers the book offers a broad range of approaches to explore the mysteries of the mind's evolution from investigating the biological functions of human cognition to drawing comparisons between human and

animal cognitive abilities This interdisciplinary work presents a comparative and evolutionary perspective on a wide variety of topics including mental algorithms for reasoning about contingencies quantities social norms and the minds of others social play and communicative abilities thought and language and the role of Darwin's theory of natural selection in evolutionary psychology Written in a highly readable style *The Evolution of Mind* will appeal to a broad range of researchers and students and help set the agenda for the field for years to come

**The Long Evolution of Brains and Minds** Gerhard Roth, 2013-06-03 The main topic of the book is a reconstruction of the evolution of nervous systems and brains as well as of mental cognitive abilities in short intelligence from simplest organisms to humans It investigates to which extent the two are correlated One central topic is the alleged uniqueness of the human brain and human intelligence and mind It is discussed which neural features make certain animals and humans intelligent and creative Is it absolute or relative brain size or the size of intelligence centers inside the brains the number of nerve cells inside the brain in total or in such intelligence centers decisive for the degree of intelligence of mind and eventually consciousness And which are the driving forces behind these processes Finally it is asked what all this means for the classical problem of mind brain relationship and for a naturalistic theory of mind

*The Evolution of Mind* Steven W. Gangestad, Jeffrey A. Simpson, 2007-01-26 An accessible reference this book features short essays with selective references Studies of evolutionary foundations of human nature have grown exponentially so this body of knowledge is expanding rapidly A wide range of eminent contributors promote synthesis across the social behavioral and life sciences

**The Evolution of the Human Mind** Norman Leslie Munn, 1971

**The Descent of Mind** Michael C. Corballis, S. E. G. Lea, 1999 To most people it seems obvious that there are major mental differences between ourselves and other species but there is considerable debate over exactly how special our minds are in what respects and which were the critical evolutionary events that have shaped us Some researchers claim language as a solely human even defining attribute while others claim that only humans are truly conscious These questions have been explored mainly by archaeologists and anthropologists until recently but this volume aims to show what psychologists have to say on the evolution of mind The book begins with a thorough overview of what is known of the non primate mind and its evolution Following this an international range of experts discuss in temporal sequence the human mind at various stages of evolution beginning with the pre hominids of 20 million years ago and ending with contemporary human behaviour Accessible to students and researchers alike in psychology anthropology evolution archaeology and ethology *The Descent of Mind* provides a range of provocative answers to the timeless question of what it means to be human

**The Evolution of Mind** Joseph McCabe, 2016-06-15 In this fluently at times brilliantly written essay Mr McCabe seeks to solve the cosmic problem of the birth and development of mind It is usual he tells us to postulate two evolutionary series the material where all varieties of energy and matter arise out of the abysmal womb of ether and the mental which set in when the earth reached a certain stage of its development Is this dualism tenable When and in what form did consciousness first appear Can mind be brought into the cosmic unity by tracing its gradual emergence from the etheric matrix These are the questions which the present work essays to answer All living matter whether plant or animal shows when it has freedom of movement two properties which we may if we will term mental or psychical namely sensitiveness or irritability or responsiveness to stimulation and spontaneous or self initiated movement But sensitiveness is also a widespread attribute of inorganic matter and spontaneous movement always turns out on careful scrutiny to be a response to environmental stimuli Here therefore is no evidence of consciousness if we speak of mind at all we are stripping the word of the distinctive significance that it has in our own experience What we are looking for is proof of consciousness But what then the reader may ask is consciousness I make no attempt to define consciousness replies our author partly because it defines itself more clearly than words can do partly because all attempts to define it have proved abortive Nevertheless he knows very well what he is in search of The question to be answered is not can we find any actions in a lower animal which are consistent with a theory of consciousness but can we find any which are inconsistent with a purely neural action The question of consciousness does not arise till then What I am chiefly seeking to determine is whether a new reality or agency besides ether intervenes at some point in the earth s story The plain purpose I have in view is to see whether and when a new reality other than ether and its products or aspects enters into the tissue of our planetary life And so he works up the scale of organic evolution and reaches one negative conclusion after another There is no proof that consciousness had appeared before the Devonian period or has since developed in any of the modern representatives of Pre Devonian animals We have no clear or cogent indication of conscious states in the whole invertebrate world or in any type of animal that lived before the Permian revolution in the earth s history We have not found a single pre Tertiary animal whose activities cannot be explained without an assumption of consciousness The whole history so far is a history of the progress of mechanism

**The American Journal of Psychology** Vol 22 *The Evolution of Man and His Mind* Shobal Vail Clevenger, 1903

experiences that come our way The authors have slogged through piles of dry research papers to provide many wonderful nuggets of information and surprising insights For example Why is an upside down red triangle such a powerful warning sign on the road What is the best kind of alibi What makes the number 7 so special Why is it better to whisper words of love into the left ear Will that recent marriage last Why is it that the French eat snails but not slugs The reader will discover the amazing tools and shortcuts that millennia of evolution have built into our brains And this knowledge is power Knowing more about how the human mind connects the dots helps us understand why decision making is so tricky With insights from evolutionary psychology we become better equipped to understand ourselves and others and to interact and communicate more effectively
