

# SOLAR SYSTEM'S EVOLUTION

## The Sun:

It was formed 4.6 billion years ago through a gravitational collapse of the solar nebula, a spinning cloud of dust and gas.

## The Planets:

Sun and planets formed together as dust particles began to clump together, forming larger bodies and leading to the formation of planets.

## Comets, Asteroids, and Debris:

About 4.1 to 3.8 billion years ago, the Late Heavy Bombardment (LHB) is a theory that supported that the earth and young planets in the solar system suffered from intense bombardment by comets and asteroids.

## The Earth Today:

Planets formed layers of structures as heavy materials, like metallic iron, melted. This led to their separation from one another.

## The Moon:

According to studies the moon was formed about 60-175 million years ago when earth collided with other planets.

## Planetary Distinction:

The solar system consists of the sun, eight planets, dwarf planets, moons, asteroids, and comets.
