Exact Constants In Approximation Theory:

Exact Constants in Approximation Theory Nikolaï Pavlovich Korneïchuk,1991-06-06 This book is intended as a self contained introduction for non specialists or as a reference work for experts to the particular area of approximation theory that is concerned with exact constants The results apply mainly to extremal problems in approximation theory which in turn are closely related to numerical analysis and optimization The book encompasses a wide range of questions and problems best approximation by polynomials and splines linear approximation methods such as spline approximation optimal reconstruction of functions and linear functionals Many of the results are based on deep facts from analysis and function theory such as duality theory and comparison theorems these are presented in chapters 1 and 3 In keeping with the author s intention to make the book as self contained as possible chapter 2 contains an introduction to polynomial and spline approximation Chapters 4 to 7 apply the theory to specific classes of functions The last chapter deals with n widths and generalises some of the ideas of the earlier chapters Each chapter concludes with commentary exercises and extensions of results A substantial bibliography is included Many of the results collected here have not been gathered together in book form before so it will be essential reading for approximation theorists *Exact Constants in Approximation Theory* N. Korneichuk,1991 *Mathematical Constants* Steven R. Finch,2003-08-18 Steven Finch provides 136 essays each devoted to a mathematical constant or a class of constants from the well known to the highly exotic This book is helpful both to readers seeking information about a specific constant and to readers who desire a panoramic view of all constants coming from a particular field for example combinatorial enumeration or geometric optimization Unsolved problems appear virtually everywhere as well This work represents an outstanding scholarly attempt to bring together all significant mathematical constants in one place **Proceedings of the St. Petersburg Mathematical Society, Volume VIII** N.N. Uraltseva,2002-04-02 The articles in this collection present new results in partial differential equations numerical analysis probability theory and geometry The results ideas and methods given in the book will be of interest to a broad range of specialists Handbook of Analytic Computational Methods in Applied Mathematics George Anastassiou,2019-06-03 Working computationally in applied mathematics is the very essence of dealing with real world problems in science and engineering Approximation theory on the borderline between pure and applied mathematics has always supplied some of the most innovative ideas computational methods and original approaches to many types of problems The f **Birkhoff Interpolation** G. G. Lorentz,K. Jetter,S. D. Riemenschneider,1984-12-28 This reference book provides the main definitions theorems and techniques in the theory of Birkhoff interpolation by polynomials The book begins with an article by G G Lorentz that discusses some of the important developments in approximation and interpolation in the last twenty years It presents all the basic material known at the present time in a unified manner Topics discussed include applications of Birkhoff interpolation to approximation theory quadrature formulas and Chebyshev systems lacunary interpolation at special

Recent Progress in Inequalities G.V. Milovanovic, 2013-03-14 This volume is dedicated to the late Professor Dragoslav S Mitrinovic 1908 1995 one of the most accomplished masters in the domain of inequalities Inequalities are to be found everywhere and play an important and significant role in almost all subjects of mathematics as well as in other areas of sciences Professor Mitrinovic used to say There are no equalities even in human life inequalities are always encountered This volume provides an extensive survey of the most current topics in almost all subjects in the field of inequalities written by 85 outstanding scientists from twenty countries Some of the papers were presented at the International Memorial Conference dedicated to Professor D S Mitrinovic which was held at the University of Nis June 20 22 1996 Audience This book will be of great interest to researchers in real complex and functional analysis special functions approximation theory numerical analysis and computation and other fields as well as to graduate students requiring the most up to date results
