Zeidler, 2026-02-02 This volume highlights the technical advances in shoreline stabilization with special emphasis on application of offshore breakwaters It provides an overview of theoretical and practical matters related to shore evolution control based on experience all over the world The main topics deal with types and functions of coastal structures coastal boundary conditions sediment transport and shore profile evolution wave loading and interactions with structures functional and geometrical design structural design including some novel methods materials construction aspects monitoring and maintenance and worldwide experience and case studies A review of some mathematical models is given in the appendix Mathematical Modeling of Shoreline Evolution Bernard LeMéhauté, Mills Soldate, 1977 A critical literature survey on mathematical modeling of shoreline evolution is presented The emphasis is on long term evolution rather than seasonal or evolution taking place during a storm The one line theory of Pelnard Considere 1956 is developed along with a number of applications Refinements to the theory are introduced by considering changes of beach slope wave diffraction effects wave variation and variation of sea level The case of hooked bays is also reviewed It is concluded that a finite difference mathematical scheme could be developed for engineering purposes for a small wave angle For the large wave angle shoreline instability does not permit use of a reliable mathematical model at this time Author **Evolution's Shore** Ian McDonald, 1996-12 A meteorite falls on Africa's Mount Kilimanjaro and the area is transformed into a new world which provides the local inhabitants with all the necessities of life as well as immortality The story is told by an Irish woman reporter who is sent to investigate the meteorite English Coastal Evolution E.
