CHAPTER

5

Imagine that some event drives up the price of gasoline in the United States. It could be a war in the Middle East that disrupts the world supply of oil, a booming Chinese economy that boosts the world demand for oil, or a new tax on gasoline passed by Congress. How would U.S. consumers respond to the higher price?

It is easy to answer this question in a broad fashion: Consumers would buy less. This conclusion follows from the law of demand, which we learned in the previous chapter. But you might want a precise answer: By how much would consumption of gasoline fall? This question can be answered using a concept called *elasticity*, which we develop in this chapter.
