 Peucker-Ehrenbrink, Birger Schmitz, 2012-12-06 Every year Earth is bombarded with about 40 000 tons of extraterrestrial  
 material This includes microscopic cosmic dust particles shed by comets and asteroids in outer space meteorites as well as  
 large comets and asteroids that have led to catastrophic events in the geologic past Originally considered only a curiosity  
 extraterrestrial matter found on Earth provides the only samples we have from comets asteroids and other planets Only  
 recently mankind has started to actively collect extraterrestrial matter in space Apollo program Stardust mission rather than  
 to wait for its delivery to Earth Still most of our knowledge of the origin and evolution of our solar system is based on careful  
 studies of meteorites cosmic dust and traces of large impact events in the geologic record such as the mass extinction that  
 terminated the Cretaceous Period and led to the extinction of the dinosaurs This book summarizes our current knowledge of  
 the properties origin orbital evolution and accretion mechanism of extraterrestrial matter accreted on Earth and sheds light  
 on accretion processes and fluxes in the geologic past The chapters in the first part of the book are arranged in order to  
 follow extraterrestrial matter from its origin in space its orbital evolution on its way to Earth its interaction with the Earth  
 magnetosphere and atmosphere to its more or less violent collision with the Earth's surface In the second part of the book  
 several chapters deal with the present day flux of cosmic dust and meteorites to Earth Finally several chapters deal with the  
 reconstruction of the accretion history of extraterrestrial matter on Earth starting with the most recent geologic past and  
 ending with the very early violent accretion period shortly after the formation of Earth Moon and other solid planets in our  
 solar system     **Going Underground: The Science And History Of Falling Through The Earth** Martin  
 Beech, 2019-03-07 This book follows the historical trail by which humanity has determined the shape and internal structure of  
 the Earth It is a story that bears on aspects of the history of science the history of philosophy and the history of mathematics  
 At the heart of the narrative is the important philosophical practice of performing thought experiments that is the art of  
 considering an idealized experiment in the mind This powerful technique has been used by all the great historical  
 practitioners of science and mathematics and this book looks specifically at the long history of considering what would  
 happen if an object could be dropped into a tunnel that cuts all the way through the Earth's interior Indeed the story begins  
 with a historical whodunit tracing back through the historical literature the origins of what is now a classic textbook problem
