Multisensor Systems for Analysis of Liquids and Gases: Trends and Developments Larisa Lvova, Dmitry

Kirsanov, 2019-01-22 Nowadays the application of multisensor systems for the analysis of liquids and gases is becoming more and more popular in analytical chemistry. Such systems, also known as electronic tongues and electronic noses, are based on various types of chemical sensors and biosensors with different transduction principles combined with multivariate data processing protocols. These instruments received significant interest due to their simplicity, low costs, and the possibility to obtain reliable chemical information from complex unresolved analytical signals. A distinct feature of electronic tongues and noses is that they can be calibrated for prediction of complex integral features in samples like e.g. taste, odor, toxicity, geographical origin, general conformity with certain standards, etc. the tasks that otherwise would require involvement of complex analytical instrumentation, human or animal sensory panels. In the present eBook, the original research and review articles in the area of multisensor approach are collected. They are dedicated to the novel sensor materials development, measuring techniques, evaluation, electronics, data processing protocols, and practical applications. An editorial foreword article is followed by the researches authored by leading scientists in the field of chemical sensors and artificial sensing systems. With this eBook, we hope to inspire further interest and new research efforts in this exciting area. **Forbidden**

Configurations in Discrete Geometry David Eppstein, 2018-05-17 This book surveys the mathematical and computational properties of finite sets of points in the plane, covering recent breakthroughs on important problems in discrete geometry and listing many open problems. It unifies these mathematical and computational views using forbidden configurations, which are patterns that cannot appear in sets with a given property, and explores the implications of this unified view. Written with minimal prerequisites and featuring plenty of figures, this engaging book will be of interest to undergraduate students and researchers in mathematics and computer science. Most topics are introduced with a related puzzle or brain teaser. The topics range from abstract issues of collinearity, convexity, and general position to more applied areas including robust statistical estimation and network visualization with connections to related areas of mathematics including number theory, graph theory, and the theory of permutation patterns. Pseudocode is included for many algorithms that compute properties of point sets.

Green finance & carbon neutrality: strategies and policies for a sustainable future Wei Zhang, Tian Tang, Satar

Bakhsh, Xuemeng Liu, 2025-09-01 The accelerating global climate crisis demands innovative and sustainable financial strategies to mitigate its impacts and facilitate the transition to a carbon neutral economy. Green finance and carbon neutrality are instrumental in this endeavor. Green finance entails financial investments directed towards sustainable development projects and initiatives that promote environmental benefits. Its growth is critical in supporting the transition to a low carbon economy. Simultaneously, the concept of carbon neutrality, which refers to achieving net zero carbon dioxide emissions by balancing or eliminating emissions entirely, has become a central goal for many governments and organizations.

worldwide The urgent global challenge that this Research Topic aims to address is how to effectively integrate green finance strategies into our path towards achieving carbon neutrality Despite the increasing importance of both these areas there remains a significant knowledge gap on how they can synergistically drive a shift towards a low carbon sustainable economy Moreover the absence of standardized regulations and lack of broad understanding of these concepts have contributed to slower adoption and implementation rates than what is urgently required The goal of this Research Topic is to consolidate recent advancements present innovative strategies and highlight successful case studies in the nexus of green finance and carbon neutrality This includes exploring novel financial instruments and models that encourage sustainable investments comprehending the socio economic impacts of moving towards a carbon neutral economy and showcasing policy mechanisms that have effectively integrated green finance and carbon neutrality By amalgamating these insights we aim to guide policymakers inform business practices stimulate further academic exploration and ultimately accelerate the global journey towards a sustainable carbon neutral future The scope of this Research Topic encompasses a broad range of themes at the intersection of green finance and carbon neutrality We are particularly interested in empirical Original Research articles in depth Reviews of current literature Policy and Practice Reviews and case studies demonstrating the successful application of green finance strategies in achieving carbon neutrality Potential topics include but are not limited to following areas Development of innovative green financial instruments Analysis of policy frameworks and regulations promoting carbon neutrality Examination of the role of ESG Environmental Social Governance factors in investment decisions Studies on the socio economic impacts of transitioning to a carbon neutral economy Manuscripts that provide novel insights propose unique models or offer critical perspectives on existing approaches are highly encouraged By collating these diverse viewpoints we aim to further enrich the dialogue on sustainable development and carbon neutrality
