**Greenhouse Gas Mitigation Assessment: A Guidebook** Jayant A. Sathaye, Stephen Meyers, 2013-11-21 This book describes guidelines prepared by the U S Country Studies Program for the evaluation of options to mitigate greenhouse gas emissions The U S Country Studies Program developed these guidelines in collaboration with Lawrence Berkeley National Laboratory to provide developing countries and countries with economies in transition with reference materials for national mitigation assessments Over 50 countries participating in the program have used the guidelines which have been refined to reflect their comments The guidelines delineate a step wise methodology for evaluating greenhouse gas mitigation options for the energy and non energy sectors and describe the applications of common analytical tools The U S Country Studies Program uses these guidelines in conjunction with intensive training workshops and follow up technical assistance during the lifetime of each country s study The program uses similar reference materials to assist counties with their greenhouse gas emission inventories and evaluations of climate change vulnerability and adaptive responses These guidelines serve three purposes to assist countries in making decisions about the scope and methodology for mitigation assessments to provide countries with guidance and step by step instructions on each element of a mitigation assessment and to help countries determine which analytical tools are best suited to their needs and describe procedures for applying these tools This book describes the application of the most common and readily available methods and analytical tools Countries are encouraged where appropriate to use their own methods Greenhouse Gas Mitigation P.W.F. Thambimuthu, 1998-02-18 Organised by the International Energy Agency Greenhouse Gas Research and Development Programme the International Conference on Technologies for Activities Implemented Jointly was held in Vancouver British Columbia Canada May 26 29 1997 The papers presented at the conference and published in these proceedings reflect the theme that Activities Implemented Jointly AIJ is a major tool to facilitate practical demonstration and development of greenhouse gas mitigation technologies Published in a single volume under the title Greenhouse Gas Mitigation the proceedings cover the following key areas Key Note Presentations International Initiatives Enhancing Sinks and Stores Maximising Joint Benefits Improved Energy Technology Asian Development Bank Transport Transmission and End Use The concept of AIJ will facilitate international cooperation to reduce greenhouse gas concentrations and mitigate effects of climate change In publishing these internationally relevant conference proceedings Greenhouse Gas Mitigation is likely to prove an invaluable reference tool for those engaged in research and application of initiatives to combat climate change

*Evaluating Options for U.S. Greenhouse-gas Mitigation Using Multiple Criteria*, 2009 Choosing a set of policy responses to mitigate greenhouse gases GHGs responsible for climate change is one of the great challenges that the United States faces in the coming years Many policy options emphasize overall cost effectiveness in reducing GHG emissions In the search for options that are effective and politically feasible however other concerns have comparable importance Mitigating GHGs in

practice will require balancing cost effectiveness and other objectives that reflect the institutional and political realities of passing major federal legislation with widespread impacts on U S producers and consumers This paper develops a framework for evaluating GHG mitigation policy in the United States that balances several criteria It draws on conceptual analysis and examples from U S energy policy to motivate an evaluative framework that incorporates a range of views of what constitutes good policy It should be of interest to stakeholders in the GHG policymaking process and especially to those responsible for crafting U S climate policy

*Modeling the Economics of Greenhouse Gas Mitigation* National Research Council, Division on Engineering and Physical Sciences, 2011-02-24 Models are fundamental for estimating the possible costs and effectiveness of different policies for reducing greenhouse gas GHG emissions There is a wide array of models to perform such analysis differing in the level of technological detail treatment of technological progress spatial and sector details and representation of the interaction of the energy sector to the overall economy and environment These differences impact model results including cost estimates More fundamentally these models differ as to how they represent fundamental processes that have a large impact on policy analysis such as how different models represent technological learning and cost reductions that come through increasing production volumes or how different models represent baseline conditions Reliable estimates of the costs and potential impacts on the United States economy of various emissions reduction and other mitigation strategies are critical to the development of the federal climate change research and development portfolio At the request of the U S Department of Energy DOE the National Academies organized a workshop summarized in this volume to consider some of these types of modeling issues

*Economic analysis of greenhouse gas*

*mitigation potential in the US forest sector* Justin Baker, Brent L. Sohngen, Sara Ohrel, Allen A. Fawcett, 2017-08-30 This study conducted an economic analysis of future US forest mitigation potential using a detailed economic model of the global forestry sector The scenario design included a wide range of possible future carbon price incentives and climate policy structures unilateral and global mitigation Results across all scenarios show US forest sector mitigation potential ranging from 54 to 292 MtCO<sub>2</sub>e between 2015 and 2030 5 to 47 percent of the additional mitigation needed to achieve the 26 to 28 percent emissions reduction target The results from this study suggest that the US forest sector can play an important role in global greenhouse gas mitigation efforts including efforts to meet any potential future US mitigation targets

*Assessing Economic Impacts of Greenhouse Gas Mitigation* National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, 2009-05-28 Many economic models exist to estimate the cost and effectiveness of different policies for reducing greenhouse gas GHG emissions Some approaches incorporate rich technological detail others emphasize the aggregate behavior of the economy and energy system and some focus on impacts for specific sectors Understandably different approaches may be better positioned to provide particular types of information and may yield differing results at times rendering decisions on future climate change emissions and research and development R 2 models and other analytic approaches to meet these needs 3 important economic considerations including equity and discounting and 4 opportunities to enhance analytical capabilities and better inform policy

*Engineering Strategies for Greenhouse Gas Mitigation* Ian S. F. Jones, 2011 Controlling the level of greenhouse gas in the atmosphere is a rapidly growing area of commercial activity While debate continues both about the impact of greenhouse gas on climate and the role humans play in influencing its concentration engineers are faced with less controversial questions of how to manage this uncertainty and how to control greenhouse gases at a minimum cost to society This book gives a concise review of current knowledge required for engineers to develop strategies to help us manage and adapt to climate change It has been developed from the author's graduate course in environmental engineering It is written without technical jargon so as to be accessible to a wide range of students and policymakers who do not necessarily have scientific or engineering backgrounds Appendices allow readers to calculate for themselves the impact of the various strategies and the book contains student exercises and references for further reading

**A Comprehensive Greenhouse Gas Mitigation Strategy for The Netherlands** Nicoletta Batini, Mr. Simon Black, Ms. Oana Luca, Ian Parry, 2021-08-20 The Netherlands has ambitious greenhouse gas emission reduction targets for the future to cut them by 49 percent below 1990 levels by 2030 and 95 percent by 2050 These targets and the likely new EU wide targets under the recent EU Green Deal entail a rapid acceleration in decarbonization This paper discusses the government's mitigation strategy and advances several recommendations to complement and reinforce that strategy and to achieve better alignment of the effective carbon prices across sectors The paper discusses alternatives to make the recently introduced industry carbon levy more efficient and

recomends the use of revenue neutral feebate schemes in industry transportation buildings and agriculture For power generation it recommends eliminating taxes on residential and industrial electricity supplementing the coal phaseout plan with an increase in the CO2 emissions floor price The impacts of these reforms on consumption would be low and relatively evenly split across the income distribution *Energy Strategies and Greenhouse Gas Mitigation* P. R. Shukla,1997 Contributed articles presented at a workshop held at Ahmedabad on Dec 8 1995 dealing in the Indian context in particular and developing countries in general Greenhouse Gas Mitigation Options for Washington State United States. Department of Energy. Office of Scientific and Technical Information,Washington State Energy Office,1996 President Clinton in 1993 established a goal for the United States to return emissions of greenhouse gases to 1990 levels by the year 2000 One effort established to help meet this goal was a three part Environmental Protection Agency state grant program Washington State completed part one of this program with the release of the 1990 greenhouse gas emissions inventory and 2010 projected inventory This document completes part two by detailing alternative greenhouse gas mitigation options In part three of the program EPA working in partnership with the States may help fund innovative greenhouse gas reduction strategies The greenhouse gas control options analyzed in this report have a wide range of greenhouse gas reductions costs and implementation requirements In order to select and implement a prudent mix of control strategies policy makers need to have some notion of the potential change in climate the consequences of that change and the uncertainties contained therein By understanding the risks of climate change policy makers can better balance the use of scarce public resources for concerns that are immediate and present against those that affect future generations Therefore prior to analyzing alternative greenhouse gas control measures this report briefly describes the phenomenon and uncertainties of global climate change and then projects the likely consequences for Washington state **Soil Carbon, Nitrogen Sequestration and Greenhouse Gas Mitigation Under Global Change** Ling Zhang,2023-04-21 Global change induced extreme climate events are becoming more common than ever Soil carbon and nitrogen pools correlated significantly with changes in atmospheric greenhouse gas Large increase in atmospheric greenhouse gases majorly carbon dioxide nitrous oxide and methane can enhance the heating of atmosphere which will be generally followed by global warming Mitigation of greenhouse gas emissions including various strategies such as the sequestrations of carbon and nitrogen in soil plant or ecosystems efficient management of agricultural and forestry ecosystems mitigation of ecosystem carbon and nitrogen leaching etc The mitigation of greenhouse gas emissions from all kinds of sources will be therefore crucial in mitigation of global climate change This reprint gathered latest case studies and methodologies including but not limited to measurement and mitigation strategies of carbon and nitrogen pools in soil plant or ecosystems and greenhouse gas emissions will substantially improve our understanding of the potential ability and capacity of ecosystems in mitigation of greenhouse gas emissions and hence global climate change This reprint can be used by colleagues working on global climate change ecology agriculture forestry and

policy makers associated with global change Chapters included in this reprint were contributed by colleagues from China Egypt Italy Jordan Mexico Pakistan Saudi Arabia Turkey etc It can be used in most countries in the world
