

Flash X-ray Radiography Technique to Study the High Velocity Impact of Soft Projectile on E-glass/Epoxy Composite Material

Flash Radiography

Don E. Bray, Roderick K. Stanley

Flash Radiography:

Flash Radiography Francis Jamet, Gustav Thomer, 1976 Nondestructive Evaluation Don E. Bray, Roderick K. Stanley, 1996-12-12 Nondestructive evaluation NDE inspection schemes are important in design manufacturing and maintenance By correctly applying techniques of NDE we can reduce machine and system failures and increase reliability of operating systems over an extended lifetime Nondestructive Evaluation A Tool in Design Manufacturing and Service introduces and discusses primary techniques used in the field including ultrasonics acoustic emission magnetics radiography penetrants and eddy currents Examples of each of these techniques are included demonstrating typical applications

Status of Flash Radiography in the USA Today and Future Possibilities, 1978 A listing of presently employed flash x ray generators is given including low energy commercially available systems and high energy very specialized installations in government laboratories These flash x ray sources are compared as to radiographic characteristics Imaging techniques and materials are surveyed and compared as to their advantages and limitations A variety of applications of flash radiography are cited including explosive ballistic diffraction crash injury and fuel injection Probable near term advances in special techniques are mentioned in cine radiography and film image enhancement Possible future developments are speculated upon such as flash radiographic applications of computerized axial tomography The recent recognition of flash radiography at professional society conferences is reviewed *Handbook on Radiation Probing, Gauging, Imaging and Analysis* E.M. Hussein, 2006-05-05 The need for this book arose from my teaching engineering and search experience in the non power aspects of nuclear technology The lack of a comprehensive textbook in industrial applications of radiation frustrated my students who had to resort to a multitude of textbooks and research publications to familiarize themselves with the fundamental and practical aspects of radiation technology As an engineer I had to acquire the design aspects of radiation devices by trial and error and often by accidental reading of a precious publication As a researcher and a supervisor of graduate students I found that the needed literature was either hard to find or too scattered and diverse More than once I discovered that what appeared to be an exciting new idea was an old concept that was tried a few decades earlier during the golden era of Atom for Peace I am hoping therefore that this book will serve as a single comprehensive reference source in a growing field that I expect will continue to expand This book is directed to both neophytes and experts and is written to combine the old and the new the basic and the advanced the simple and the complex It is anticipated that this book will be of help in living older concepts improving and expanding existing techniques and promoting the development of new ones

Nondestructive Characterization of Materials X R.E. Green, N. Takeda, B.B. Djordjevic, T. Saito, T. Kishi, 2001-03-20 The papers published in these peer reviewed proceedings represent the latest developments in nondestructive characterization of materials and were presented at the Tenth International Symposium on Nondestructive Characterization of Materials held on June 26 30 2000 in Karuizawa Japan The symposium was held concurrently with three other symposia

and one workshop This symposium is the tenth in the series that began in 1983 and became an international meeting in 1986 The symposium started with a Plenary Lecture entitled Application of Non contact Ultrasonics to Nondestructive Characterization of Materials by Professor R E Green Jr Various characterization methods were presented at the symposium including ultrasonics X ray eddy currents laser thermal wave acoustic emission optical fibers optics magnetics and ultrasonic microscope Thin films and coatings as well as smart materials were also emphasized in this symposium **Flash Radiography as a Quantitative Tool** ,1984 Flash radiographs have long been useful for interpreting dynamic events Such interpretation ranges from merely looking at a radiograph to aid in understanding the event to fully deconvolving film densities to reconstruct actual masses and positions Between these two extremes are the possibilities of using trained observers to select features of interest or of using densitometers to aid in such descriptions Several examples of these latter methods will be illustrated to indicate that reasonable precision can be obtained in this way and that flash radiography can indeed be a quantitative science The examples will be from the field of shock wave hydrodynamics The radiographs were taken at the PHERMEX facility a 25 MeV machine emitting about 30 R at a meter in a pulse of 100 ns for these examples The first situation involves the selection of the position of a thin low density beryllium foil embedded in a moving high density material uranium The second will involve the selection of the location or of the alignment direction of step mass discontinuities such as those found in shock waves or in interfaces between materials of different density Such discontinuities may be slowly curving and the problem is that of determining tangents at selected locations Both spall in lead and multiple intersecting shocks in lead will be described The third situation will involve the selection of the alignment of the head of a rarefaction wave the problem of a density gradient with a discontinuous first derivative The example will be oblique reflection of a detonation wave from an open edge in the explosive PBX 9404 The last situation will involve the problem of a material density gradient with continuous first derivative The example will be low density material ejected from a lead surface that has been shocked In this last case the answer is not a single selection but a variation as a function of location

DDC Retrieval and Indexing Terminology Defense Documentation Center (U.S.),1975 [History of Shock Waves, Explosions and Impact](#) Peter O. K. Krehl,2008-09-24 This unique and encyclopedic reference work describes the evolution of the physics of modern shock wave and detonation from the earlier and classical percussion The history of this complex process is first reviewed in a general survey Subsequently the subject is treated in more detail and the book is richly illustrated in the form of a picture gallery This book is ideal for everyone professionally interested in shock wave phenomena

Comparison of 2-3MV X-Ray Sources for Flash Radiography, 2002 High brightness flash x ray sources are needed for penetrating dynamic radiography for a variety of applications Various bremsstrahlung source experiments have been conducted on the TriMeV accelerator 3MV 60 Omega 20 ns to determine the best diode and focusing configuration in the 2 3 MV range Three classes of candidate diodes were examined gas cell focusing magnetically immersed and rod pinch The best result for the gas cell diode was 6 rad at 1 meter from the source with a 5 mm diameter x ray spot Using a 0 5 mm diameter cathode immersed in a 17 T solenoidal magnetic field the best shot produced 4 1 rad with a 2 9 mm spot The rod pinch diode demonstrated very reproducible radiographic spots between 0 75 and 0 8 mm in diameter producing 1 2 rad This represents a factor of eight improvement in the TriMeV flash radiographic capability above the original gas cell diode to a figure of merit dose spot diameter 1 8 rad mm These results clearly show the rod pinch diode to be the choice x ray source for flash radiography at 2 3 M V endpoint
