The Global Experience Learning Curve

Read the overview below and complete the activities that follow.

An understanding of marketing beyond home markets develops over time as a company gets more international business experience. This process is referred to as the global experience learning curve. Review the stages of the global experience learning curve and categorize the following statements by the stage in which it belongs.

This activity is important because expansion into international markets comes with great opportunities and great risks. Marketing managers need to understand how best to navigate the global experience curve.

The goal of this activity is for you to demonstrate an understanding of the different stages of the global experience learning curve by determining how industry-specific examples fit into each of the stages.

The global experience learning curve moves a company through four distinct stages: no foreign marketing, foreign marketing, international marketing, and global marketing. The process is not always linear; companies may, for example, move directly from no foreign marketing to international marketing without necessarily engaging in foreign marketing. In addition, the amount of time spent in any stage can vary; some companies remain in a stage for many years.

Read the statements. Drag and drop each item into the correct spot within the chart.

Apparel Maker	Fiber Manufacturer	Companies with No Foreign Marketing	Companies with Foreign Marketing
Erewhon Organic	ABC Appliances	International Marketing	Global Marketing

The Global Experience: Readings in world history since 1500 Philip F. Riley,1992 **Wayfinding Behavior** Reginald G. Golledge,1999-01-14 The metaphor of a cognitive maphas attracted wide interest since it was first proposed in the late 1940s Researchers from fields as diverse as psychology geography and urban planning have explored how humans process and use spatial information often with the view of explaining why people make wayfinding errors or what makes one person a better navigator than another Cognitive psychologists have broken navigation down into its component steps and shown it to be an interplay of neurocognitive functions such as spatial updatingand reference framesor perception action couplings But there has also been an intense debate among biologists over whether animals have cognitive maps or have other forms of internal spatial representations that allow them to behave as if they did Yet until now little has been done to relate research on human and non human subjects in this area In Wayfinding Behavior Cognitive Mapping and Other Spatial Processes Reginald Golledge brings together a distinguished group of scholars to offer a unique and comprehensive survey of current research in these diverse fields Among the common themes they discover is the psychologists black boxapproach in which the internal mechanisms of spatial perception and route planning are modeled or constructed like metaphors based on the behavioral evidence Cognitive neuroscientists on the other hand have attempted to discover the neurocognitive basis for spatial behavior They have shown for example that damage in the hippocampus system invariably impairs the ability of animals and humans to learn about remember and navigate through environments and studies in humans show that neurons in this system code for location direction and distance thereby providing the elements needed for a mapping system Artificial intelligence and robotics theorists attempt to construct intelligent mapping systems using computer technology In these areas there is growing evidence that as in human wayfinding processes useful representations cannot be achieved without sacrificing completeness and precision Wayfinding Behavior Cognitive Mapping and Other Spatial Processes offers not only state of the art knowledge about wayfinding but also represents a point of departure for future interdisciplinary studies The more we know concludes volume editor Reginald Golledge about how humans or other species can navigate wayfind sense record and use spatial information the more effective will be the building of future guidance systems and the more natural it will be for human beings to understand and control those systems *Voluntourism and Language Learning/Teaching* Larissa Semiramis Schedel,Cori Jakubiak,2023-12-28 This edited volume extends current voluntourism theorizing by critically examining the intersections among various forms of work leisure travel and language learning teaching The book s contributors investigate volunteer tourism and its cognates such as working holidaymaking international internships and gap year labor as discursive fields in which powerful ideas about language s their speakers and pedagogical practices are propagated worldwide The various authors chapters shed light on the hegemony of global English the social consequences of linguistic commodification and neoliberal rationalities the ways in which speaker identity positions can alter the exchange
