Fuzzy Hardware Architectures And Applications:

Fuzzy Hardware Abraham Kandel,Gideon Langholz,2012-12-06 Fuzzy hardware developments have been a major force driving the applications of fuzzy set theory and fuzzy logic in both science and engineering This volume provides the reader with a comprehensive up to date look at recent works describing new innovative developments of fuzzy hardware An important research trend is the design of improved fuzzy hardware There is an increasing interest in both analog and digital implementations of fuzzy controllers in particular and fuzzy systems in general Specialized analog and digital VLSI implementations of fuzzy systems in the form of dedicated architectures aim at the highest implementation efficiency This particular efficiency is asserted in terms of processing speed and silicon utilization Processing speed in particular has caught the attention of developers of fuzzy hardware and researchers in the field The volume includes detailed material on a variety of fuzzy hardware related topics such as Historical review of fuzzy hardware research Fuzzy hardware based on encoded trapezoids Pulse stream techniques for fuzzy hardware Hardware realization of fuzzy neural networks Design of analog neuro fuzzy systems in CMOS digital technologies Fuzzy controller synthesis method Automatic design of digital and analog neuro fuzzy controllers Electronic implementation of complex controllers Silicon compilation of fuzzy hardware systems Digital fuzzy hardware processing Parallel processor architecture for real time fuzzy applications Fuzzy cellular systems Fuzzy Hardware Architectures and Applications is a technical reference book for researchers engineers and scientists interested in fuzzy systems in general and in building fuzzy systems in particular **Hardware Implementation of Intelligent Systems** Horia-Nicolai Teodorescu,Abraham Kandel,2013-11-11 Intelligent systems are now being used more commonly than in the past These involve cognitive evolving and artificial life robotic and decision making systems to name a few Due to the tremendous speed of development on both fundamental and technological levels it is virtually impossible to offer an up to date yet comprehensive overview of this field Nevertheless the need for a volume presenting recent developments and trends in this domain is huge and the demand for such a volume is continually increasing in industrial and academic engineering 1 communities Although there are a few volumes devoted to similar issues none offer a comprehensive coverage of the field moreover they risk rapidly becoming obsolete The editors of this volume cannot pretend to fill such a large gap However it is the editors intention to fill a significant part of this gap A comprehensive coverage of the field should include topics such as neural networks fuzzy systems neuro fuzzy systems genetic algorithms evolvable hardware cellular automata based systems and various types of artificial life system implementations including autonomous robots In this volume we have focused on the first five topics listed above The volume is composed of four parts each part being divided into chapters with the exception of part 4 In Part 1 the topics of Evolvable Hardware and GAs are addressed In Chapter 1 Automated Design Synthesis and Partitioning for Adaptive Reconfigurable Hardware Ranga Vemuri and co authors present state of the art adaptive architectures their classification and their applications **Methodologies For The Conception, Design And**
