Gene Structure and Expression Donald H. Dean,1980 Lexical Semantic Gene Structure of Modern Chinese Dan Hu,2025-07-26 This book draws on genetic theory to explore the microstructure of lexical meaning the operating mechanism of the lexical semantic system and its formal representation and methods for large scale lexical computing resource construction At the theoretical level the basic framework of lexical semantic gene theory is proposed and elaborated In this context a lexical semantic gene is a basic structural unit of lexical meaning that controls a semantic feature of a word and can be inherited and recombined to construct a new word Lexical meaning has multiple dimensions and each dimension is regarded as a semantic feature composed of several lexical semantic genes according to certain semantic relations The generation of new words is the result of the inheritance reorganization and mutation of lexical semantic genes Drawing on this basis the book subsequently explores the techniques of lexical semantic gene extraction and formalized description of lexical semantic genetic structure at the level of engineering technology Bearing in mind the dual needs of formalized representation of semantic computation on the one hand and traditional language teaching research and lexicography on the other the book employs language fact analysis to define strategies methods and operational procedures for a lexical semantic gene depiction meta language system lexical semantic genetic structure analysis and lexical semantic gene extraction At the application level the computational and traditional applications of the lexical semantic gene database are discussed

Regulation of Gene Expression in Plants Carole L. Bassett,2007-02-15 Except for one area of gene expression control plant research has significantly fallen behind studies in insects and vertebrates The advances made in animal gene expression control have benefited plant research as we continue to find that much of the machinery and mechanisms controlling gene expression have been preserved in all eukaryotes Through comparison we have learned that certain aspects of gene regulation are shared by plants and animals i e both contain introns separating the coding regions of most genes and both utilize similar machinery to process the introns to form mature mRNAs Yet there are some interesting differences in gene structure and regulation between plants and animals For example unlike animal genes plant genes are generally much smaller with fewer and smaller introns Regulation of Gene Expression in Plants presents some of the most recent novel and fascinating examples of transcriptional and posttranscriptional control of gene expression in plants and where appropriate provides comparison to notable examples of animal gene regulation

Gene Structure and Transcription Trevor John Clark Beebee,Julian Burke,1988 Emphasizing exciting recent developments in the study of gene structure and transcription processes this compares and contrasts eukaryotic and prokaryotic gene structure transcription apparatus and regulation of transcription at molecular level

Weinzierl, 1999 This book presents much of the current thinking concerning molecular mechanisms of transcriptional control in a form easily accessible to undergraduates with an understanding of basic molecular biology concepts It contains detailed information about the various pro and eukaryotic transcriptional machineries that has recently become available through the combined efforts of geneticists biochemists and structural biologists The book will thus not only serve as an undergraduate text but also offer something new and interesting to more advanced readers and professional scientists who want to keep up to date with rapid advances in this field BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved **Report** National Institute for Medical Research (Great Britain), 1981

Gene Regulation Bert O'Malley, 2012-12-02 Gene Regulation documents the proceedings of the CETUS UCLA Symposium Gene Regulation held in Keystone Colorado in March April 1982 The symposium related gene structure and regulatory sequences to overall genomic organization and genetic evolution It was the first meeting to focus on regulation of eukaryotic gene expression since the maturation in recombinant DNA technology The book is organized into four parts Part I presents studies on the structure of eukaryotic genes including the organization and molecular basis for differential expression of the mouse light chain genes globin gene transcription and RNA processing and the cloning of the human chromosomal a1 antitrypsin gene and its structural comparison with the chicken gene coding for ovalbumin Part II on chromatin structure includes papers on nuclease sensitivity of the ovalbumin gene and its flanking DNA sequences and the relationship of chromatin structure to DNA sequence Part III on gene expression includes papers on the role of poly A in eukaryotic mRNA metabolism and the in vitro transcription of Drosophila tRNA genes Part IV on cellular biology includes studies such as the importance of calmodulin to the eukaryotic cells *Who's who in Technology*, 1986 Fifth ed published in 7 vols Who s who in biotechnology Who s who in chemistry Who s who in civil engineering earth sciences Who s who in electronics Who s who in mechanical engineering Who s who in physics and Master index of expertise master index of names **Gene Expression** Federation of European Biochemical Societies, Brian Frederic Carl Clark, Hans Klenow, 1978 **Medical Research Council Annual Report** Medical Research Council (Great Britain), 1984 *Molecular Approaches to Gene Expression and Protein Structure* M Siddiqui, 2012-12-02 Molecular Approaches to Gene Expression and Protein Structure documents the proceedings of the international symposium Gene and Protein Structure held in conjunction with the 22nd annual meeting of the Chilean Society of Biology at the campus of the Universidad Austral de Chile in Valdivia Chile December 1979 Organized by the Chilean Society of Biology the symposium was designed not only to explore the concepts involved in the evolution of

genes and protein structure but to bring together scientists from the United States and their counterparts from the Chilean academic institutions The subject matter presented in this book reflects the research interests and experiences of the participating authors The emphasis in general is on molecular and regulatory processes and cellular control mechanisms The chapters include reviews on selected areas of interest written in a manner intelligible to newcomers to biological research and present an in depth analysis of the work with a balanced presentation of facts concepts and projections

Chromatin Structure and Gene Expression Sarah C. R. Elgin, Jerry L. Workman, 2000 Since publication of the first edition in 1995 there have been significant advances and understanding of chromatin structure and its relation to gene expression These include a high resolution structure of the nucleosome core discovery of the enzymes and complexes that mediate histone acetylation and deacetylation discovery of novel ATP dependent chromatin remodeling complexes new insights into nuclear organization and epigenetic silencing mechanisms In light of these advances Chromatin Structure and Gene Expression 2ed includes updated chapters and additional material that introduce new concepts in the process of gene regulation in chromatin

Gene Transfer R. Kucherlapati, 2012-12-06 Genetic analysis of microbial systems provided us with the foundation for understanding gene structure expression and regulation It was long felt that the ability to generate mutants and conduct genetic studies in mammalian systems would prove to be equally useful However genetic analysis based on sexual systems is difficult in mammals because of the long generation times and the inability to perform controlled matings As a result genetic analysis of mammalian systems had to await the development of parasexual systems This book is an attempt to bring together descriptions of a number of these parasexual systems A common theme of all the parasexual systems is the transfer of genetic information from a defined source into a specific cell type This volume deals with a number of methods of gene transfer into mammalian cells The early methods of gene transfer involved transfer of relatively large amounts of genetic information These include somatic cell hybridization microcell fusion and chromosome transfer which constitute the first part of this book Each of these methods has already proven to be of enormous value in arriving at a genetic understanding of the mammalian genome Development of recombinant DNA methods and the ability to introduce purified DNA into mammalian cells has had a significant impact on our ability to dissect important aspects of mammalian gene expression and regulation The second part of this book deals with gene transfer systems involving defined nucleic acid sequences
