Environment And Behavior:

Perspectives on Environment and Behavior Daniel Stokols, 2012-03-30 The inception of this volume can be traced to a series of Environmental Psychology Colloquia presented at the University of California Irvine during the spring of 1974. These colloquia were held in conjunction with Social Ecology 252, a graduate seminar on Man and the Environment. Although the eight colloquia covered a wide range of topics and exemplified a diversity of research techniques, they seemed to converge on some common theoretical and methodological assumptions about the nature of environment behavioral research. The apparent continuities among these colloquia suggested the utility of developing a manuscript that would provide a historical overview of research on environment and behavior, a representation of its major concerns, and an analysis of its conceptual and empirical trends. Thus, expanded versions of the initial presentations were integrated with a supplemental set of invited manuscripts to yield the present volume of original contributions by leading researchers in the areas of ecological and environmental psychology.

Environment and Behavior C. Holahan, 2012-12-06 This book has been written as a text for advanced undergraduate students and graduate students in the burgeoning field of study that has come to be called environment and behavior. It is appropriate for courses in environmental psychology, social ecology, ecological psychology, and community psychology when the community is conceptualized from an ecological viewpoint. In addition, the book may be used in design courses oriented toward an appreciation of the interaction between architecture and human behavior. The book presents a thorough explication of a perspective or viewpoint in approaching the study of environment and behavior which has tended to be underemphasized in past work in this area. The dynamic perspective focuses on the active role people play in dealing with environmental challenges. Its investigative interest is in the processes that mediate the effects of environment on behavior, especially the positive and adaptive ways in which people cope with the environment. The accent is on the creative, complex yet subtle character of these environmental processes.

Human Behavior and Environment Irwin Altman, Joachim F. Wohlwill, 2013-11-11 This is the first in a series of volumes concerned with research encompassed by the rather broad term environment and behavior. The goal of the series is to begin the process of integration of knowledge on environmental and behavioral topics so that researchers and professionals can have material from diverse sources accessible in a single publication. The field of environment and behavior is broad and interdisciplinary with researchers drawn from a variety of traditional disciplines such as psychology, sociology, anthropology, geography, and other social and behavioral sciences, and from the biological and life sciences of medicine, psychiatry, biology, and ethology. The interdisciplinary quality of the field is also reflected in the extensive involvement of environmental professionals from architecture, urban planning, landscape architecture, interior design, and other fields such as recreation and natural resources, to name just a few. At present, the field has a somewhat chaotic flavor with research being carried out by a variety of scholars who publish in a multitude of outlets. Many researchers and practitioners are unaware of the state of knowledge regarding a

specific topic because of the unavailability of integrated reference materials There are only a handful of books dealing with environment and behavior most of them unintegrated collections of readings with only an occasional systematic analysis of some facet of the field **Human Behavior and Environment** Irwin Altman, Joachim F. Wohlwill, 2012-12-06 The theme of the present volume concerns people's response to the natural environment considered at scales varying from that of a household plant to that of vast wilderness areas Our decision to focus on this particular segment of the physical environment was prompted in part by the intrinsic interest in this subject on the part of a diverse group of social scientists and professionals and of laypersons for that matter and in part by the relative neglect of this topic in standard treatments of the environment behavior field It also serves to bring out once again the interdisciplinary nature of that field and we are pleased to have been able to include representatives from geography sociology ecology and natural recreation among our contributors We believe that this volume will serve a useful purpose in helping to integrate the findings and concepts in this presently somewhat fragmented field scattered as they are over a very diverse array of publications representing a similarly varied group of specialties It is hoped that the result will be to stimulate future development of this area and to add a measure of increased coherence to it Volume 7 of our series will be devoted to the theme of elderly people and the environment with M Powell Lawton joining us as guest co editor The titles of the papers comprising Volume 7 are shown on page v Irwin Altman Joachim F Wohlwill ix Contents Introduction

Environment and Behavior Donald M. Baer, 2020-12-07 This book is organized around the clusters of details about how behavior is controlled by its environmental antecedents and about how behavior can control its antecedents It illustrates how to integrate environmental awareness into professional practice and design **Theoretical Perspectives in**

Environment-Behavior Research Seymour Wapner, 2000 Following upon the Handbook of Japan United States Environment Behavior Research published by Plenum in 1997 leading experts review the interrelationships among theory problem and method in environment behavior research The chapters focus on the philosophical and theoretical assumptions underlying current research and practice in the area and link those assumptions to specific substantive questions and methodologies

Environment and Behavior Studies Irwin Altman, Kathleen Christensen, 2012-12-06 This eleventh volume in the series departs from the pattern of earlier volumes Some of those volumes addressed research design and policy topics in terms of environmental settings for example homes communities neighborhoods and public places Others focused on environmental users for example children and the elderly The present volume examines the field of environment and behavior studies itself in the form of intellectual histories of some of its most productive and still visible senior participants In so doing we hope to provide readers with a grand sweep of the field its research and design content methodology institutions and past and future trajectories through the experiences and intellectual histories of its participants Why intellectual histories Several factors led to the decision to launch this project For one 1989 was an anniversary and commemorative year for the Environmental Design Research Association perhaps the major and most long standing interdisciplinary organization of environment and behavior researchers and practitioners Established in 1969 this organization has been the vehicle for generations of researchers and practitioners from many disciplines to come together annually to exchange ideas present papers and develop professional and personal relationships It held its first and twentieth meetings in North Carolina with the twentieth conference substantially devoted to discussions of the past present and future of the field a taking stock so to speak Thus it seemed appropriate to launch a volume on

intellectual histories at this significant juncture in the life of the field

Encouraging Sustainable Behavior Hans C.M. van Trijp, 2013-08-15 Increasingly it is being recognized that consumer behavior may be a key trigger in the march toward sustainable development Several lines of psychological theory and approaches have been developed relatively independently each of which may provide major implications and action points on how consumers might be moved toward more sustainable behavior This book is the first that brings together this variety of perspectives and theoretical angles around the common ambition of sustainable development The contributors are all leading social scientists

in the field of consumer behavior who met the challenge to sketch out their theoretical perspectives but also to go beyond their normal theorizing and think out of the box in order to show how these theoretical perspectives might be made actionable in terms of key managerial and policy perspectives toward sustainable development. The result is a book that shows a wealth of information and approaches the question of how to encourage sustainable behavior from a myriad of divergent perspectives. This should stimulate scientists and policy makers alike to find similarities, differences, and synergies between state-of-the-art psychological thinking about how to most effectively stimulate sustainable consumer behavior.

Handbook of Japan-United States Environment-Behavior Research Jack Demick, T. Takahashi, Seymour Wapner, C. Takiji Yamamoto, 1996-11-30. This volume is an outgrowth of research on the relations between human beings and their environments which has developed internationally. This development is evident in environment behavior research studies conducted in countries other than the United States. See Stokols and Altman 1987 for examples of such work in Australia, Japan, France, Germany, the Netherlands, Sweden, the United Kingdom, the former Soviet Union, and Latin and North America. The international development of this research area is also evident in the establishment of professional organizations in different countries such as the Environment Behavior Design Research Association (EDRA) in the United States, the Man Environment Research Association (MERA) in Japan, the International Association for People Environment Studies (IAPS) in Great Britain, and the People and Physical Environment Research Association (PAPER) in Australia. This volume focuses on environment behavior research within Japan and the United States as well as cross-cultural studies involving both countries. As we note in detail in Chapter 1, the conference on which the work presented herein is based was preceded by three Japan-United States conferences on environment behavior research, the first of which took place in Tokyo in 1980. As currently conceived, the present volume stands alone as a compendium of a significant proportion of cross-cultural research on environment behavior relations in Japan and the United States that has been developing over the last 15 years. As such, we envision the volume as a basic interdisciplinary reference for anthropologists, architects, psychologists, sociologists, urban planners, and environmental geographers.

Encouraging Pro-Environmental Behaviour Wokje Abrahamse, 2019-01-23. *Encouraging Pro-Environmental Behavior: What Works, What Doesn't, and Why* examines the main drivers of human behavior related to environmental sustainability and how we can encourage environmental behavior change in humans. The book explores the underlying barriers and enablers of environmental behavior and outlines key theoretical advances from psychology to improve understanding. It then uses theory-based research in the development of behavior change interventions to critically evaluate empirical evidence on the effectiveness of those interventions. This book will help inform and improve the success of behavior change initiatives to mitigate climate change. Explores what influences behavior who conserves and why. Includes both theory and practice. Focuses on water and energy use, food choice, and travel behavior. Identifies impacts of incentives and interventions.

Mental Hygiene, 1928 *Nature and Environment: The Psychology of Its Benefits and Its Protection* Marc Glenn Berman, 2017-04-20

Our Research Topic section entitled Nature and the environment The psychology of its benefits and its protection will have two main lines The first line of articles will center upon cutting edge research showing how interacting with nature can affect health well being and overall improve cognition and affect Articles in this line will stress in what ways nature can improve psychological functioning and health and also discuss the theories and evidence as to why nature can improve psychological functioning For this line we welcome submission of articles that discuss the psychological health and well being benefits from interacting with nature as well as submissions that focus on theoretical considerations and underlying mechanisms that lead to the restorative effects of interacting with nature Given that nature can have a positive impact on psychological functioning and overall health it is also important to understand the variables that facilitate people s recognition of environmental issues that can help foster a more positive attitude towards the preservation of nature This brings us to the second line of articles which will center upon the psychological mechanisms that make individuals more or less likely to accept the seriousness of environmental challenges such as climate change Given the new cutting edge research in this field we may be able to make individuals more proactive in the protection of the environment and more accepting of policy measures required to mitigate climate change We see this research topic as a way for psychological scientists to contribute substantially to an important area of public debate and policy For this line we welcome articles that will focus on ways in which people respond to various framings of policy relevant information and how morality may play into the individuals policy views that center on climate change and environmental protection
