Exercise Intolerance And Muscle Contracture:

Exercise Intolerance and Muscle Contracture Georges Serratrice, Jean Pouget, Jean-Philippe Azulay, 2013-11-27 The main themes presented in this volume are exercise intolerance and muscle contracture. These two topics could seem different at first sight but share common clinical features. For instance symptoms of exercise intolerance are myalgias and cramps but metabolic contractures as well. Likewise exercise intolerance is sometimes due to dystrophinopathy it self causing contractures. Therefore it is justified to gather these two syndromes in one study. Exercise intolerance and muscle contracture could seem well known even obsolete. It is not right. A reappraisal of these has become necessary for two reasons. First of all there are many new causes of exercise intolerance secondly the pathophysiology remains obscure in particular for muscle contracture and a clear classification is probably possible. There is no book devoted to exercise intolerance and muscle contracture. This volume is divided in two parts related to the above topics. The two sections are introduced by a didactic and general overview describing the main symptoms classification and classical etiology. The other chapters written by the best experts present the recent advances in these syndromes and show many new aspects: new glycogenosis or mitochondriopathies, dystrophinopathies, malignant hyperthermia, myotonic disorders. Pathophysiology and classification of persistent contractures are described as well as therapy. Each chapter is thoroughly referenced representing important progress in research in the field.

Oxford Textbook of Neuromuscular Disorders David Hilton-Jones, Martin R. Turner, 2014 Part of the Oxford Textbooks in Clinical Neurology series the Oxford Textbook of Neuromuscular Disorders covers the scientific basis, clinical diagnosis and treatment of neuromuscular disorders with a particular focus on the most clinically relevant disorders. The book is organized into seven sections starting with the general approach to the patient with neuromuscular disorders and then focusing on specific neuromuscular conditions affecting the peripheral nervous system from its origins at the spinal cord anterior horn on its outward course to their effector muscles and the inbound sensory pathways. Chapters on specific neuromuscular conditions are illustrated with typical case histories and their presenting features allowing readers to put rarer conditions into their clinical context more easily. The concurrent online version allows access to the full content of the textbook contains links from the references to primary research journal articles allows full text searches and provides access to figures and tables that can be downloaded to PowerPoint.
