Experience Affect Behavior:

Behavior Analysis and Modeling of Traffic Participants Xiaolin Song,Haotian Cao,2022-06-01 A road traffic participant is a person who directly participates in road traffic such as vehicle drivers passengers pedestrians or cyclists however traffic accidents cause numerous property losses bodily injuries and even deaths to them To bring down the rate of traffic fatalities the development of the intelligent vehicle is a much valued technology nowadays It is of great significance to the decision making and planning of a vehicle if the pedestrians intentions and future trajectories as well as those of surrounding vehicles could be predicted all in an effort to increase driving safety Based on the image sequence collected by onboard monocular cameras we use the Long Short Term Memory LSTM based network with an enhanced attention mechanism to realize the intention and trajectory prediction of pedestrians and surrounding vehicles However although the fully automatic driving era still seems far away human drivers are still a crucial part of the road driver vehicle system under current circumstances even dealing with low levels of automatic driving vehicles Considering that more than 90 percent of fatal traffic accidents were caused by human errors thus it is meaningful to recognize the secondary task while driving as well as the driving style recognition to develop a more personalized advanced driver assistance system ADAS or intelligent vehicle We use the graph convolutional networks for spatial feature reasoning and the LSTM networks with the attention mechanism for temporal motion feature learning within the image sequence to realize the driving secondary task recognition Moreover aggressive drivers are more likely to be involved in traffic accidents and the driving risk level of drivers could be affected by many potential factors such as demographics and personality traits Thus we will focus on the driving style classification for the longitudinal car following scenario Also based on the Structural Equation Model SEM and Strategic Highway Research Program 2 SHRP 2 naturalistic driving database the relationships among drivers demographic characteristics sensation seeking risk perception and risky driving behaviors are fully discussed Results and conclusions from this short book are expected to offer potential guidance and benefits for promoting the development of intelligent vehicle technology and driving safety

Psychosis and Near Psychosis Eric R. Marcus,2012-12-06 Psychosis and Near Psychosis offers a psychoanalytically based approach to an integrated treatment of psychosis and near psychosis achieved by organizing psychotherapy medication hospital and milieu interventions into a powerful therapeutic tool The author navigates confidently between psychiatric and psychoanalytic approaches between biological evidence and psychological assessments According to Dr Eric Marcus since the past so called heroic psychoanalyses with psychotic patients have clearly been shown to fail the time is now ripe again to discuss psychosis in terms of the broadened psychoanalytic theory with the support of medication and a better understanding of the neuropsychological factors involved This book which maps out mental illness in concrete and innovative ways will interest all researchers and clinicians eager to find the best means both practical and theoretical to initiate satisfying psychiatric therapies

Handbook of Agricultural Productivity Miloslav Rechcigl,2018-01-18

The greatest challenge of our time is to produce sufficient food to keep pace with the rapidly growing population. In the opinion of experts during the next 25 years there will be a need for as much food as was produced in the entire history of mankind to date. Of the various measures available, improvement in agricultural productivity is judged as the ultimate means of augmenting food production and supplies. In this Handbook, an international team of experts consider the most important factors affecting production of both crops and livestock. This Handbook is intended as a scientific guide to practitioners and students as well as to researchers who should find here stimulating ideas for further exploration.

Product Experience
Hendrik N. J. Schifferstein, Paul Hekkert, 2011-04-28

Product Experience brings together research that investigates how people experience products, durable, non-durable, or virtual. In contrast to other books, the present book takes a very broad, possibly all-inclusive perspective on how people experience products. It thereby bridges gaps between several areas within psychology, e.g., perception, cognition, emotion, and links these areas to more applied areas of science such as product design, human-computer interaction, and marketing. The field of product experience research will include some of the research from four areas: Arts, Ergonomics, Technology, and Marketing. Traditionally, each of these four fields seems to have a natural emphasis on the human, ergonomics, and marketing, the product, technology, or the experience, arts. However, to fully understand human product experience, we need to use different approaches and we need to build bridges between these various fields of expertise. Most comprehensive collection of psychological research behind product design and usability. Consistently addresses the 3 components of human product experience: the human, the product, and the experience. International contributions from experts in the field.
