Enumerability. Decidability. Computability Hans Hermes,1969 **Enumerability, Decidability, Computability** Hans Hermes,1969 *Enumerability · Decidability Computability* Hans Hermes,2012-12-06 Once we have accepted a precise replacement of the concept of algorithm it becomes possible to attempt the problem whether there exist well defined collections of problems which cannot be handled by algorithms and if that is the case to give concrete cases of this kind Many such investigations were carried out during the last few decades The undecidability of arithmetic and other mathematical theories was shown further the unsolvability of the word problem of group theory Many mathematicians consider these results and the theory on which they are based to be the most characteristic achievements of mathematics in the first half of the twentieth century If we grant the legitimacy of the suggested precise replacements of the concept of algorithm and related concepts then we can say that the mathematicians have shown by strictly mathematical methods that there exist mathematical problems which cannot be dealt with by the methods of calculating mathematics In view of the important role which mathematics plays today in our conception of the world this fact is of great philosophical interest Post speaks of a natural law about the limitations of the mathematicizing power of Homo Sapiens Here we also find a starting point for the discussion of the question what the actual creative activity of the mathematician consists in In this book we shall give an introduction to the theory of algorithms Computability Theory Neil D. Jones,2014-06-20 Computability Theory An Introduction provides information pertinent to the major concepts constructions and theorems of the elementary theory of computability of recursive functions This book provides mathematical evidence for the validity of the Church Turing thesis Organized into six chapters this book begins with an overview of the concept of effective process so that a clear understanding of the effective computability of partial and total functions is obtained This text then introduces a formal development of the equivalence of Turing machine computability enumerability and decidability with other formulations Other chapters consider the formulas of the predicate calculus systems of recursion equations and Post's production systems This book discusses as well the fundamental properties of the partial recursive functions and the recursively enumerable sets The final chapter deals with different formulations of the basic ideas of computability that are equivalent to Turing computability This book is a valuable resource for undergraduate or graduate students **Computable Functions** Nikolai Konstantinovich Vereshchagin,Alexander Shen,2003 Based on the lectures for undergraduates at Moscow State University this book presents a lively and concise introduction to the central facts and basic notions of the general theory of computation It begins with the definition of a computable function and an algorithm and discusses decidability enumerability universal functions numberings and their properties the fixed point theorem arithmetical hierarchy oracle computations and degrees Computability Theory: an Introduction Neil D. Martin,1991 **Kyūshū Daigaku Rigakubu Kiyō** ,1970 International Philosophical Quarterly ,1971 **Mathematical Logic** Heinz-Dieter Ebbinghaus,J. Flum,W. Thomas,1984 This careful self contained introduction to first order logic includes an exposition of certain topics not usually found in introductory texts such as Trachtenbrot s undecidability theorem Fraisse s characterization of elementary equivalence and Lindstr m s theorem on the maximality of first order logic The presentation is detailed and systematic without being long winded or tedious The role of first order logic in the foundations of mathematics is worked out clearly particularly the two basic questions of the range of the axiomatic method and of theorem proving by machines Many exercises accompany the text **Introduction to the Theory of Computation** Erwin Engeler,1973 *University of California Union Catalog of Monographs Cataloged by the Nine Campuses from 1963 Through 1967: Authors & titles* University of California (System).
