Understanding the basic cognitive function of human memory is critical in a wide variety of fields such as clinical psychology, developmental psychology, education, neuroscience, and gerontology, and studying memory has become particularly urgent in recent years due to the prominence of a number of neurodegenerative diseases such as Alzheimer's. However, choosing the most appropriate method of research is a daunting task for most scholars. This book explores the methods that are currently available in various areas of human memory research and serves as a reference manual to help guide readers' own research. Each chapter is written by prominent researchers and features cutting edge research on human memory and cognition with topics ranging from basic memory processes to cognitive neuroscience to further applications. The focus here is not on the what but the how: how research is best conducted on human memory. *Higher Level Language Processes in the Brain* Franz Schmalhofer, Charles A. As a derivative volume from *Encyclopedia of Language and Linguistics* Second Edition, it comprises contributions from the foremost scholars of semantics in their various specializations and draws on 20 years of development in the parent work in a compact and affordable format. Principally intended for tertiary level inquiry and research, this will be invaluable as a reference work for undergraduate and postgraduate students as well as academics inquiring into the study of meaning and meaning relations within languages. As pragmatics is a centrally important and inherently cross-cutting area within linguistics, it will therefore be relevant not just for meaning specialists but for most linguistic audiences.
