Forensic Mass Spectrometry:

Forensic Mass Spectrometry Jehuda Yinon, 1987-08-31 *Advances in Forensic Applications of Mass Spectrometry* Jehuda Yinon, 2003-12-29 Recent developments in analytical instrumentation have had an enormous influence on forensic analysis. The mass spectrometer is now an integral part of every forensic laboratory, resulting in greater analytical accuracy, more reliable identification, and lower detection limits. As the instrumental method of choice among forensic analysts, the mass spectrometer has become the most versatile analytical technique due to the vast range of analytes that it can detect and quantify, and as such, for its contribution to a significant number of life science fields. The legal and forensics community has certainly benefited from this technique, which has been able to provide reliable evidence in court cases. Liquid Chromatography Gas Chromatography Mass Spectrometry (LC/GC/MS) still has a dominant role in the provision of forensic intelligence. However, in the past decade, new and exciting MS-based techniques have emerged and are or have evolved to be at an operational deployment maturity, enabling either fast ambient, non-destructive, or portable screening, or encompass all of these features. In this book, developments of LC/MS and GC/MS based techniques are covered with respect to operational practice and new applications, accompanied by other MS-based techniques that are increasing forensic opportunities and that operate on a variety of evidence types. Whilst the underpinning working principles of each relevant mass spectrometry technique are summarised, each chapter primarily focuses on its implementation in criminal investigation and court cases. In the last chapters, this book additionally covers emerging MS technologies that are at the beginning of their operational implementation journey, as well as niche applications outside the fields of traditional forensic science, but with a clear potential to impact future investigations beyond the courtroom. This book provides an up-to-date reference for the mass spectrometry-based tools that are currently available, both as established and as emerging methods within forensic practice. It will help casework commissioning managers and forensic providers worldwide to make more informed decisions as to the forensic strategy and workflow when examining exhibits. It is also recommended to postgraduates and early career investigators with reference to the contribution that these techniques and methods could make if applied to classic forensic science practice.

Forensic Applications of Mass Spectrometry Jehuda Yinon, 2020-11-25 *Forensic Applications of Mass Spectrometry* combines the most current developments in applications of mass spectrometry techniques to forensic analyses. The techniques discussed include capillary GC/MS, thermospray LC/MS, tandem mass spectrometry, MS/MS, pyrolysis GC/MS, isotope ratio mass spectrometry. The applications include analysis of body fluids and hair for drugs of abuse, drug testing in sports, analysis of accelerants in fire debris, detection of hidden explosives in luggage and mail, identification of explosives in post-explosion debris, examination of evidential materials, paints, fibers, synthetic polymers, authentication of regulated products, flavoring substances, fruit juices, protection of industrial products by isotopic signature. *Library of Congress*

Subject Headings Library of Congress,2010 **Library of Congress Subject Headings** Library of Congress. Cataloging Policy and Support Office,2013 A Review of Forensic Mass Spectrometry MA. Throck Watson,1976 *Applications of Time-of-Flight and Orbitrap Mass Spectrometry in Environmental, Food, Doping, and Forensic Analysis* ,2016-06-02 Applications of Time of Flight and Orbitrap Mass Spectrometry in Environmental Food Doping and Forensic Analysis deals with the use of high resolution mass spectrometry MS in the analysis of small organic molecules Over the past few years time of flight ToF and Orbitrap MS have both experienced tremendous growth in a great number of analytical sectors and are now well established in many laboratories where high requirements are placed on analytical performance This book gives a head to head comparison of

these two technologies that compete directly with each other As users with hands on experience in both techniques the authors provide a balanced description of the strengths and weaknesses of both techniques In the vast majority of cases ToF MS and Orbitrap MS have been used for qualitative purposes mainly identification of discrete molecular entities such as drug metabolites or transformation products of environmental contaminants This paradigm is now changing as quantitative capabilities are increasingly being explored as are non target approaches for unbiased broad scope screening In view of the continuous innovation of high resolution MS instrument manufacturers in designing and developing more powerful machines technological advances in both hardware and software are considerable with many novel applications This book summarizes and analyzes these trends The compilation of selected examples from diverse analytical fields will allow the readers to discover not only the potential of high resolution MS in their sector but also shows advances in other fields that rely on hi res MS Provides comprehensive coverage of applications of time of flight and orbitrap mass spectrometry in environmental food doping and forensic analysis Explores a variety of specialized techniques giving a balanced description of the strengths and weaknesses of each Presents a general overview of imaging techniques within analysis
