Riemannian Geometry

The study of manifolds having a complete Riemannian metric. Riemannian geometry is a general space based on the line element

$$ds = F\left(x^1, \ldots, x^n; dx^1, \ldots, dx^n\right),$$

with $F(x, y) > 0$ for $y \neq 0$ a function on the tangent bundle $T\,M$. In addition, F is homogeneous of degree 1 in y and of the form

$$F^2 = g_{ij}(x)\, dx^i\, dx^j$$

(Chern 1996). If this restriction is dropped, the resulting geometry is called Finsler geometry.

Geometry Iv Nonregular Riemannian Geometry:

Geometry IV Yu.G. Reshetnyak,2013-03-14 The book contains a survey of research on non regular Riemannian geome try carried out mainly by Soviet authors The beginning of this direction oc curred in the works of A D Aleksandrov on the intrinsic geometry of convex surfaces For an arbitrary surface F as is known all those concepts that can be defined and facts that can be established by measuring the lengths of curves on the surface relate to intrinsic geometry In the case considered in differential is defined by specifying its first geometry the intrinsic geometry of a surface fundamental form If the surface F is non regular then instead of this form it is convenient to use the metric PF defined as follows For arbitrary points X Y E F PF X Y is the greatest lower bound of the lengths of curves on the surface F joining the points X and Y Specification of the metric PF uniquely determines the lengths of curves on the surface and hence its intrinsic geometry According to what we have said the main object of research then appears as a metric space such that any two points of it can be joined by a curve of finite length and the distance between them is equal to the greatest lower bound of the lengths of such curves Spaces satisfying this condition are called spaces with intrinsic metric Next we introduce metric spaces with intrinsic metric satisfying in one form or another the condition that the curvature is bounded   **Geometry IV** Yu. Manin,1994-03-29 This book the first printing of which was published as volume 38 of the Encyclopaedia of Mathematical Sciences presents a modern approach to homological algebra based on the systematic use of the terminology and ideas of derived categories and derived functors The book contains applications of homological algebra to the theory of sheaves on topological spaces to Hodge theory and to the theory of modules over rings of algebraic differential operators algebraic D modules The authors Gelfand and Manin explain all the main ideas of the theory of derived categories Both authors are well known researchers and the second Manin is famous for his work in algebraic geometry and mathematical physics The book is an excellent reference for graduate students and researchers in mathematics and also for physicists who use methods from algebraic geometry and algebraic topology   **Representations of Finite-Dimensional Algebras** Peter Gabriel,Andrei V.
